Easily Align Bore or Hone Main Bearings on 3.7L and 4.7L Chrysler Engines

The 4.7L Chrysler V-8, 2000-09 and the 3.7L Chrysler V-6 2002-09 use a bedplate connecting all the main bearing caps in one structural unit. This creates difficulty when align boring or honing the main bearings. MAHLE Clevite exclusively offers Clevite® engine bearings with .002" oversized OD main sets for these two engines. Sets for both engines are available in .25mm and .50mm under crankshaft sizes.

**Part numbers available*: MS2285A-.25mm,
MS2285A-.50mm, MS2286A-.25mm, MS2286A-.50mm**

**Sets do NOT include thrust washers - order TW-608S, as needed.*
