

A male technician wearing a black polo shirt, safety glasses, and gloves is working on the engine of a car with its hood open. He is using a blue hose connected to a large grey MAHLE ArcticPRO refrigerant machine. The machine has two pressure gauges, a digital display showing 'R134a', and the MAHLE ArcticPRO logo. In the background, there is a workshop setting with a window, a toolbox, and a tool chest.

Safety precautions and notes

The information in the following tables has been compiled using data from vehicle manufacturers and other sources, and it is applicable only to air conditioning systems in their original designs. Only specially trained professionals should carry out work on air conditioning systems, taking into account the relevant safety precautions and country-specific laws.

All rights reserved, including those to the translation. No part of this table may be reproduced in any form—mechanical, electronic, photocopy, microfilm, or otherwise, including extracts thereof—without our written permission. This information has been compiled carefully. As the material is extensive, we cannot guarantee the correctness of all the information. When this information is published, previous versions lose their validity.

Product features

PAO 68 oil and PAO 68 Plus UV oil

- Nonhygroscopic: in contrast to other oils, these do not absorb any moisture from the ambient air
- Can be used as an alternative to a range of PAG oils (see application overview): stock one oil instead of three
- Successfully used in practice for more than 20 years
- Helps to increase the air conditioning system's performance
- No adverse effects on components in the air conditioning circuit (also applies to use in air conditioning service units/confirmed by manufacturers using the sealed glass tube method in accordance with the ASHRAE 97 standard)
- Available with (PAO 68 Plus UV oil) or without (PAO 68 oil) the addition of a contrast agent

Advantages/effect

PAO 68 oil

- Being nonhygroscopic, PAO 68 oil is easy to use in workshops; the required amount of oil can also be taken from large containers (e.g., 5 liters)
- A low degree of refrigerant solubility in the oil means that the PAO 68 oil is not diluted and retains its full viscosity in the air conditioning compressor
- Oil film inside the components creates a better seal and decreases friction between the air conditioning compressor's moving parts
- Reduced operating temperature and wear
- Results in increased operational safety and reduces noise, running time, and energy consumption by the air conditioning compressor

PAO 68 Plus UV oil

- Same positive characteristics as PAO 68 oil
- Additional admixture of a fluorescent contrast agent for UV leak detection
- Low vol% concentration of the contrast agent with the following advantages: preserves the oil's positive characteristics and avoids negative effects on system components or service equipment
- Suitable for use as the sole oil for filling the entire system, without any negative effects

Additional details

Is PAO 68 oil compatible with other oils?

- PAO 68 oil does not damage fluoroelastomer materials, such as hoses and seals.
- Since PAO 68 oil is compatible with many other lubricants and refrigerants, it can be used both when topping off and when changing the system's entire oil volume. Owing to its molecular structure and density, PAO 68 oil can be mixed to a certain extent with other oils, but separates from them again when it settles and does not form a permanent bond.
- This guarantees that the necessary viscosity of the oils is maintained and there is no change in the overall viscosity.

The clear version of PAO 68 AA1 oil (without leak detecting agent) is also approved for use with R1234yf and in electric air conditioning compressors in Hybrid and electric vehicles.

Oils in comparison

Type of oil	Application	Notes
PAG oils for refrigerant R134a	There are various PAG oils with different flow characteristics (viscosities) for use with refrigerant R134a. PAG oils are hygroscopic. This means that cans do not have a long shelf life once opened.	Standard PAG oils are not suitable for refrigerant R1234yf or for electrically driven air conditioning compressors.
PAG YF oil for refrigerants R1234yf and R134a	There are also various PAG oils with different flow characteristics (viscosities) for use with refrigerant R1234yf. What makes these PAG oils from the BEHR sales brand special is that they are not only suitable for use with the refrigerant R1234yf but can also be used with the refrigerant R134a. As PAG oils are hygroscopic, cans do not have a long shelf life once opened.	PAG YF oil is suitable for both R1234yf and R134a refrigerants.
PAG SP-A2 oil for refrigerants R1234yf and R134a	For use in electrically driven air conditioning compressors that have been filled ex works with a special PAG oil.	
PAO 68 oil for refrigerant R134a, and in some cases for refrigerant R1234yf and others	Can be used as an alternative to the various PAG oils that are offered for R134a (has the advantage of being nonhygroscopic—i.e., in contrast to other oils, it does not absorb any moisture from the ambient air). The two different PAO 68 oils offered by MAHLE under the BEHR sales brand (AA1 and AA3) can be used in conjunction with numerous different refrigerants (see product overview).	 The clear version of PAO 68 AA1 oil (without leak detecting agent) can also be used with the new refrigerant R1234yf as well as in electrically driven air conditioning compressors in Hybrid and electric vehicles.

PAO and other oils

Product	Application	A/C compressor type	Refrigerant	Viscosity class	Contents	MAHLE reference no.

Notes on passenger cars (*)

1	Condenser with round tubes
2	Condenser with flat tubes
3	16 mm condenser
4	23 mm condenser
5	Rear engine
6	Front engine
7	Expansion valve, old type
8	Expansion valve, new type
9	See sticker in the engine compartment
n/a	Total quantity for system unknown or not indicated by manufacturer—see sticker in engine compartment or on compressor, if applicable
q	Quantity dependent on configuration—see sticker in engine compartment or on compressor
w	18 mm condenser
e	20 mm condenser

VIN = vehicle identification number; CW = calendar week

Notes on passenger cars (*)

f	Thickness of flat condenser tube
g	Without oil cooler
h	Condenser module, drier integrated in condenser
i	ORGA/identification number, see info in A-/B-column area

VIN = vehicle identification number; CW = calendar week
