

Aftermarket of tomorrow—from the oil pump to the oil management module

- Electric and hybrid vehicles require lightweight and efficient oil management solutions
- With its OEM expertise, MAHLE is able to supply the aftermarket quickly

Stuttgart/Germany, November 25, 2019 – The oil pump is a traditional part of the day-to-day life of a workshop. But how is oil management changing with the advent of e-mobility?

The demands on oil management in electric vehicles with an oil-cooled powertrain differ significantly from those of a classic combustion engine. That's why MAHLE has launched a new oil management module for the OEM segment, with a unit that comprises a filter, electric oil pump, cooler, and thermostat. This oil management module enables vehicle manufacturers to deal with the increasing requirements associated with the development of high-performance electric drives. MAHLE is able to bring the replacement parts needed for maintenance and repair—such as filter elements, coolers, or pumps—to the aftermarket quickly, thanks to its expertise in original equipment.

“A MAHLE product used for original equipment today can be offered as a complete solution for the aftermarket tomorrow—with a high level of availability, top quality, and all the services and information needed in the workshop. These range from diagnostics to training,” explains Olaf Henning, Corporate Executive Vice President and General Manager MAHLE Aftermarket.

By continuously expanding its product portfolio in the area of new mobility, MAHLE has been preparing for the mobility transformation for some time—and is paving the way for the MAHLE Aftermarket portfolio of tomorrow. As a solutions provider, MAHLE not only has the right spare parts to hand but also supports the workshops with diagnostics

tools and service equipment, training, and repair and maintenance information (RMI).

About MAHLE

MAHLE is a leading international development partner and supplier to the automotive industry as well as a pioneer for the mobility of the future. The group's product portfolio addresses all the crucial issues relating to the powertrain and air conditioning technology—both for drives with combustion engines and for e-mobility. In 2018, the group generated sales of approximately EUR 12.6 billion with more than 79,000 employees and is represented in over 30 countries with 160 production locations.

About MAHLE Aftermarket

MAHLE Aftermarket, the business unit specializing in spare parts, uses the expertise from the series production of original equipment in its automotive aftermarket product range and supplies trade, workshop, and engine repair partners. The portfolio also includes products developed by MAHLE Service Solutions for workshop equipment as well as comprehensive services and customized training programs. MAHLE Aftermarket is represented at 25 locations and other sales offices worldwide, with around 1,700 employees. In 2018, the business unit achieved a global sales volume of over EUR 928 million.
