MAHLE wins electrification order in China

- MAHLE will produce DC/DC converters for future battery electric vehicles of an international car manufacturer in China
- Contract volume €200 million
- Production will start at the MAHLE location in Changshu in 2028
- The leading market of China offers MAHLE growth opportunities

MAHLE secures another order in the field of electrification in China. By supplying a DC/DC converter the technology group is supporting an international car manufacturer in China with its future battery-electric model range. The contract volume is €200 million. Series production at the MAHLE Changshu location will start in the middle of 2028. “China is the leading market for the electrification of vehicles, and I am pleased that this order will enable us to expand our presence in the largest automotive market in the world,” said Dr. Roger Busch, MAHLE Head of Sales & Technology and Member of the Management Committee. “The speed of innovation in China is enormous. We see potential for further growth, especially in the areas of electrification and thermal management.”

DC/DC converters transform the voltage of the high-voltage battery from 800 volts into a low voltage level of 12 volts. This supplies all 12 volts devices in a vehicle that cannot be operated with a battery voltage of 800 volts, for example cameras, multimedia systems, or electric pumps.

MAHLE will manufacture the product in its currently emerging production and development location for e-mobility in Changshu. Around 600 employees work there.

The Group cooperates with all international vehicle and engine manufacturers in China, as well as major Chinese OEMs. MAHLE develops and produces locally for the Chinese market and the world.

About MAHLE

MAHLE is a leading international development partner and supplier to the automotive industry with customers in both passenger car and commercial vehicle sectors. Founded in 1920, the technology group is working on the climate-neutral mobility of tomorrow, with a focus on the strategic areas of electrification and thermal management as well as further technologies to reduce carbon emissions, such as fuel cells or highly efficient, clean combustion engines that also run on renewable fuels, such as hydrogen. Today, one in every two vehicles globally is equipped with MAHLE components.

MAHLE generated sales of almost €13 billion in 2023. Employing more than 72,000 people at 148 production locations and 11 technology centers, the company is represented in 29 countries. (Last revised: 12/31/2023)
