

CareMetix®

blocks particles and odors

Harmful ammonia and sulfur gases—along with unpleasant odors—can develop in traffic jams, tunnels, around large construction sites, sewage treatment plants, or freshly fertilized fields. The new **CareMetix®** cabin air filter provides protection through S5 broadband technology. It ensures that fine particulates, pollen, mold, soot, bacteria, and odors don't enter the cabin.

CareMetix®

The innovative cabin air filter
with S5 broadband technology

mahled-096/08.2020/EN

Take a safe breath

The air we breathe is often polluted with harmful, allergenic substances and odors that conventional filters can't eliminate. The solution: **CareMetix®** with S5 broadband technology. Five layers for five-fold protection.

Protection against soot and fine particulates (PM_{2.5} and PM₁)

Protection against harmful gases and unpleasant odors

Protection against pollen and released allergens

Protection against mold spores

Protection against bacteria

CareMetix® is also available for vehicles using alternative drive concepts.

Five-fold protection

When a vehicle is in operation, more than 100,000 liters of air are swept into the cabin every hour. The only barrier against pollution: the filter in the ventilation system.

- 1 Filters out pollen, fine particulates (PM_{2.5}, PM₁), and ultrafine particles (e.g., diesel soot and brake dust)
- 2 Eliminates unpleasant odors, protects against allergens, and prevents the growth of bacteria and mold almost entirely
- 3 Highly effective at eliminating harmful gases like hydrocarbons
- 4 Highly effective at eliminating harmful gases like nitrogen oxides (NO_x) and sulfur dioxide (SO₂)
- 5 Helps to increase filter stability

Always the right choice

The right cabin air filter for every need

Good, better, or the best? Particulate filter, combination filter with activated carbon layer, or **CareMetix®**—MAHLE has just the right cabin air filter to meet your requirements. Your workshop will be happy to advise you!

Good to know

Cabin air filters should be replaced annually or at least every 15,000 kilometers. To ensure you and your loved ones only breathe in fresh air: ask for **CareMetix®**. For a noticeably improved sense of well-being in your vehicle.
