

Keep cool! It's time for the A/C check

- Can save you money
- Keeps you safe
- Better for your health
- Also important for electric vehicles

Move safely through the traffic with a clear head:

Did you know that your air conditioning system can lose up to 10 percent of its refrigerant per year? This not only reduces cooling capacity, but can, in the worst case, cause damage to individual components—and even lead to total failure of the system! Regular maintenance of the air conditioning system will help to ensure that it continues to function smoothly.

An A/C check and service can **save you money**, as possible damage is detected in good time before total failure occurs.

A/C checks and services keep you **safe**, maintaining a comfortable temperature and allowing you to concentrate fully on the road.

A/C checks and services protect your **health**, keeping dust, pollen, fungi, and bacteria out of the vehicle interior.

A regularly serviced, properly functioning A/C system is also essential for the cooling of the temperature-sensitive traction battery in **electric and hybrid vehicles**. Additionally, it extends the traction battery's service life and improves the vehicle's cruising range.

You can find more useful information about A/C maintenance here.
