

MAHLE

A/C compressor oil
PAG and PAO oils

BEHR®

Many types of oil are available — which one is recommended?

Oil plays an important role in air conditioning systems.

Whether you're changing the air conditioning compressor oil or topping it up during an air conditioning service, the oil in the air conditioning system performs vital functions—just like the blood in the human body.

That's why using a high-grade compressor oil is crucial for ensuring that the system operates safely and for a long time. Just like in an engine, the use of low-grade or incorrect oils results in increased wear, premature failure of the compressor, and loss of the warranty or guarantee.

The wrong choice can lead to damage. Vehicle- or manufacturer-specific instructions must be followed carefully.

PAG oil Performance for a good atmosphere

Product characteristics

- PAG oils are fully synthetic, hygroscopic oils based on polyalkylene glycol
- Used during construction by many vehicle and compressor manufacturers in air conditioning systems with refrigerant R134a, available at various viscosities
- Special new PAG oils 46 YF and 100 YF suitable for both R1234yf and R134a refrigerants

Advantages/effect

- PAG oils are highly miscible with R134a (PAG oils 46 YF and 100 YF can also be mixed with R1234yf) and are suitable for lubricating the air conditioning systems of most passenger cars and commercial vehicles.
- It's important to choose the right viscosity class when using PAG oils (PAG 46, PAG 100, PAG 150). The vehicle manufacturer's specifications and approved products should be taken into account.

Additional details

The disadvantage of PAG oils is that they are hygroscopic, which means that they absorb and bind moisture from the ambient air.

If the moisture content in the air conditioning system is too high, this can contribute to the formation of acids and corrosion, resulting in damage to components and leaks.

For this reason, any oil containers that have been opened must be resealed immediately; the residual oil will also only have a limited shelf life. This applies in particular to the fresh oil containers in air conditioning service units.

New to the range

New PAG SP-A2 oil from SANDEN for special, electric SANDEN air conditioning compressors.
Reference number ACPL 9 000P/8FX 351 213-141

PAO 68 oil and PAO 68 Plus UV oil

Product characteristics

- Not hygroscopic: unlike other oils, these do not absorb any moisture from the ambient air
- Can be used as an alternative to a range of PAG oils (see the usage overview): stock one oil instead of three
- Successfully used in practice for more than 20 years
- Helps to increase the air conditioning system's performance
- No adverse effects on components in the air conditioning circuit (also applies to use in air conditioning service stations/confirmed by manufacturers on the basis of sealed tube tests in accordance with the ASHRAE 97 standard)
- Available with (PAO 68 Plus UV oil) or without the addition of a contrast agent (PAO 68 oil)
- Using PAO 68 oil and PAO 68 Plus UV oil in compressors from MAHLE maintains your full warranty entitlement

Advantages and effect

PAO 68 oil

- Being nonhygroscopic, PAO oil is easy to use in workshops. The required amount of oil can also be taken from large containers (e.g., 5 liters).
- A low degree of refrigerant solubility in the oil means that the PAO oil is not diluted and retains its full viscosity in the compressor.
- Oil film inside the components creates a better seal and decreases friction between the compressor's moving parts.
- Reduced operating temperature and wear.
- Results in increased operational safety and reduces noise, running time, and energy consumption by the compressor.

PAO 68 Plus UV oil

- Same positive characteristics as PAO 68 oil
- Additional admixture of a fluorescent contrast agent for UV leak detection
- Low vol% concentration of the contrast agent with the following advantages: preserves the oil's positive characteristics and avoids negative effects on system components or service equipment

Additional details

Is PAO 68 oil compatible with other oils?

- PAO 68 oil does not damage fluoroelastomer materials, such as hoses and seals.
- Since PAO 68 oil is compatible with many other lubricants and refrigerants, it can be used both when topping up and when changing the system's entire oil volume. Its molecular structure and density mean that, although PAO 68 oil can be mixed to a certain extent with other oils, it separates from them again when it settles and does not form a permanent bond.
- This guarantees that the necessary viscosity of the oils is maintained and there is no change in the overall viscosity (see figures on the following page).

How was PAO 68 Plus UV oil tested?

- PAO 68 Plus UV oil has been tested by the manufacturer and by independent institutes. For example, its chemical stability was established using the "sealed tube test" in compliance with the ASHRAE 97 standard. This test evaluates the interaction between the refrigerant, the refrigerant oil, the various O-ring materials, and the metals that are used in air conditioning systems.
- All the tests produced positive results, confirming that negative effects on components in the vehicle air conditioning system or the air conditioning service station can be excluded. PAO 68 Plus UV oil can thus be added directly to a component, such as a compressor, or introduced into the refrigerant circuit via the air conditioning service station.

PAO 68 Clear Version oil (without leak detecting agent) is also approved for use with R1234yf and in electric air conditioning compressors in hybrid and electric vehicles.

Can PAO 68 oil be used in situations where there are problems with humidity?

- PAO 68 is not hygroscopic—i.e., unlike other oils, it does not absorb any moisture from the ambient air. This means that humidity-related problems, such as the icing up of components or the formation of acids, can be combated by using only PAO 68 oil. The range of possible uses and the storage stability of PAO 68 oil are significantly greater than for conventional oils.

Special properties and characteristics

- No risk of oil collecting in the evaporator and the associated deterioration in cooling performance
- An oil film in the components improves the seal
- Reduction in the friction between the components
- Lower energy consumption by the compressor
- Unique combination of highly refined, synthetic oil and special performance-enhancing additives
- Extensive operating range (–68°C to 315°C)
- Low vol% concentration of the highly active contrast agent in PAO 68 Plus UV oil, which means the system components and service units are protected and subject to reduced wear

The oils in comparison

Type of oil	Application	Remark
PAG oils for refrigerant R134a	There are various PAG oils with different flow characteristics (viscosities) for use with refrigerant R134a. As PAG oils are hygroscopic, cans do not have a long shelf life once opened.	Standard PAG oils are not suitable for refrigerant R1234yf or for electrically driven air conditioning compressors.
PAG YF oil for refrigerants R1234yf and R134a	There are also various PAG oils with different flow characteristics (viscosities) for use with refrigerant R1234yf. What makes these PAG oils from MAHLE special is that they are not only suitable for use with the refrigerant R1234yf but can also be used with the refrigerant R134a. As PAG oils are hygroscopic, cans do not have a long shelf life once opened.	PAG oil YF is suitable for both R1234yf and R134a refrigerants.
PAG SP-A2 oil for refrigerants R1234yf and R134a	For use in electric air conditioning compressors, such as those manufactured by SANDEN and VISTEON (Hanon).	
PAO oil for refrigerant R134a, and in some cases for refrigerant R1234yf and others	Can be used as an alternative to the various PAG oils that are offered for R134a (has the advantage of not being hygroscopic, i.e., unlike other oils, it does not absorb any moisture from the ambient air). The two different PAO oils offered by MAHLE (AA1 and AA3) can be used in conjunction with numerous different refrigerants (see product overview).	PAO AA1 Clear Version oil (without leak detecting agent) can also be used with the new refrigerant R1234yf as well as in electrically driven air conditioning compressors in hybrid and electric vehicles.
