

MAHLE

Work. Perfectly done.

WORK. PERFECTLY DONE.

You give your all to ensure that your work is always as perfect as possible, so that couriers, truck drivers, farmers, or construction workers can do their work with confidence. That's why we've got your back. With great passion and commitment, we provide you with an extensive product range in the best OE quality as well as top service, so that you can fully concentrate on your job and make sure that everything runs smoothly.

You can rely on us: MAHLE's OEM competence

When it comes to commercial vehicles, you can rely on our extensive know-how and expertise. After all, MAHLE stands for outstanding quality and durability. By means of hard work, our products and systems have earned this reputation all around the world—both on the road and in off-road applications. One success factor is our OEM competence with almost all vehicle manufacturers and in all vehicle segments and product groups. And this has been the case for more than 100 years.

You can find MAHLE products almost anywhere in the world. We are a globally operating Group, because we want to be close to our OE aftermarket and workshop customers. MAHLE products always reflect the same quality—regardless of production location or region. Today, we produce MAHLE quality at 160 locations in over 30 countries.

And each of our locations manufactures according to the same standards, with German engineering and know-how.

Well equipped at all times

In the future, MAHLE will continue to be your partner and first choice among your suppliers. Why? Because we know what tomorrow's fleets will need. After all, we work along with commercial vehicle manufacturers to develop these vehicles. In our research and development centers around the world, we are currently working on alternative drive concepts—whether battery-powered, hydrogen-based, or based on climate-neutral fuels. The resulting knowledge also finds its way directly into MAHLE's Aftermarket business unit. This is why we can offer and supply you with the right products for your work at any given time.

Vans: city, country, highway

Vans are multifunctional vehicles, and when it comes to assemblies, they have a lot in common with passenger cars. But the versatile, fast, and light commercial vehicles are often subject to just as much stress as trucks. Your customers' vans have to perform reliably even under the most challenging conditions—fully loaded and at top speed. Poor road conditions, high speeds, or constant stop-and-goes therefore require durable and high-quality components and spare parts.

To ensure that the technician gets to his customer on time and that the package is delivered as promised, MAHLE provides you with the full range of products relating to engine cooling & air conditioning, workshop equipment & diagnostics, engine parts, gaskets, filters, starter motors & alternators, and e-mobility & electronics.

Heavy-duty trucks: for the long haul

Large, heavy, powerful: trucks are designed for a long service life and high mileage. The demands on them are high. Freight forwarders, fleet operators, and drivers are under constant time and cost pressure. Breakdowns must therefore be kept to a minimum.

To keep trucks running consistently over long distances, MAHLE has a wide range of products for your customers relating to engine parts, gaskets, filters, starter motors & alternators, engine cooling & air conditioning, workshop equipment & diagnostics, and e-mobility & electronics.

Construction machines: work never stops

These machines perform heavy-duty work day in and day out and are always tested to the max. Engines, transmissions, and cooling systems of construction machines must reliably withstand extreme demands. You'll ensure that construction machines start without a hitch, withstand the high pulling, hydraulic, and lifting power over a long period of time, and that they can also handle the constant changes between forward and reverse operations.

To ensure that your work never stops, MAHLE offers a wide range of products for construction machines such as filters, starter motors & alternators, engine parts, electronics, and workshop equipment.

Agricultural machines: on the move on all terrains

Your customers' agricultural machines are in use day and night, especially during the harvest season. Tractors pull loading and forage trailers and presses, roll the forage pile in the bunker silo, mix, feed, and are used for transportation. In other words, they are powerful multifunctional machines used on all terrains and in all seasons—irreplaceable in day-to-day business.

To ensure that the field is plowed on time and that the work on the construction site doesn't stop, MAHLE offers you a wide range of products for agricultural machines relating to engine cooling & air conditioning, workshop equipment, engine parts, gaskets, filters, starter motors & alternators, and electronics.
