Use of CLEVITE® engine bearing, MAHLE® gasket, piston and piston ring, filter, and BEHR® engine cooling and air conditioning products in aircraft or other specialty equipment may be a violation of Local, State or Federal Regulatory Agency laws, rules and regulations.

These products are intended solely for automotive applications. Under absolutely NO circumstances should these products ever be used in non-automotive applications including, without limitation, aircraft engines, medical equipment, atomic energy devices or reactors.

"Federal, State and local laws restrict the removal, rendering inoperative, or in some cases the modification of factory installed emission devices or systems. California restricts the use of parts which could increase emissions

in vehicles designed for use on public streets or highways. The sale or installation on emission controlled vehicles of certain emission control components not approved by the California Air Resources Board, which alter or modify the original design or performance of such vehicle's emission control system is prohibited. Some of the parts listed and offered for sale in this catalog may fall within the above restrictions. Such parts are intended only for use on off-road vehicles competing in competitive events or on other types of vehicles which are exempt from the applicable emission control laws. Installation of these parts on vehicles subject to emission control laws may be prohibited.

MAHLE Lifecycle & Mobility recommends that the applicable emission control laws be reviewed before considering the installation of add-on or modified parts."

Filters have a long tradition with us.

MAHLE – historically a developer of engine components – has recognized in good time how important optimally functioning filters are for the different circulations of service media. After all, every combustion is only as good as its upstream filters – whether oil, fuel or intake air has to be cleaned. And because people only stay healthy when they breathe clean air, cabin air filters are an important part of our program.

MAHLE has a comprehensive program of filters for passenger cars (BEV, hybrid and ICE), commercial vehicles, agricultural and construction machinery as well as motorcycles. As an innovative development partner of the automotive industry,

we manufacture filters and filter systems that are optimally matched to engine characteristics, assembly conditions and applications. Our partners in repair benefit from this with filters in original equipment quality for oil, air, fuel, with ecologically-friendly filter cartridges, activated carbon canisters, air dryers, oil separators, hydraulic filters and cabin air filters, which can also be retrofitted for certain vehicles.

www.mahle-aftermarket.com

Oil filters (OX / OC)

Engine oil is constantly exposed to contaminants like combustion residues, dust, soot, and metal particles, which accelerate engine wear. MAHLE oil filters maintain oil purity and protect engine components by reliably removing these particles. Stable pleat geometry ensures cold-start stability, while the high-pressure-resistant housing withstands load peaks up to 20 bar.

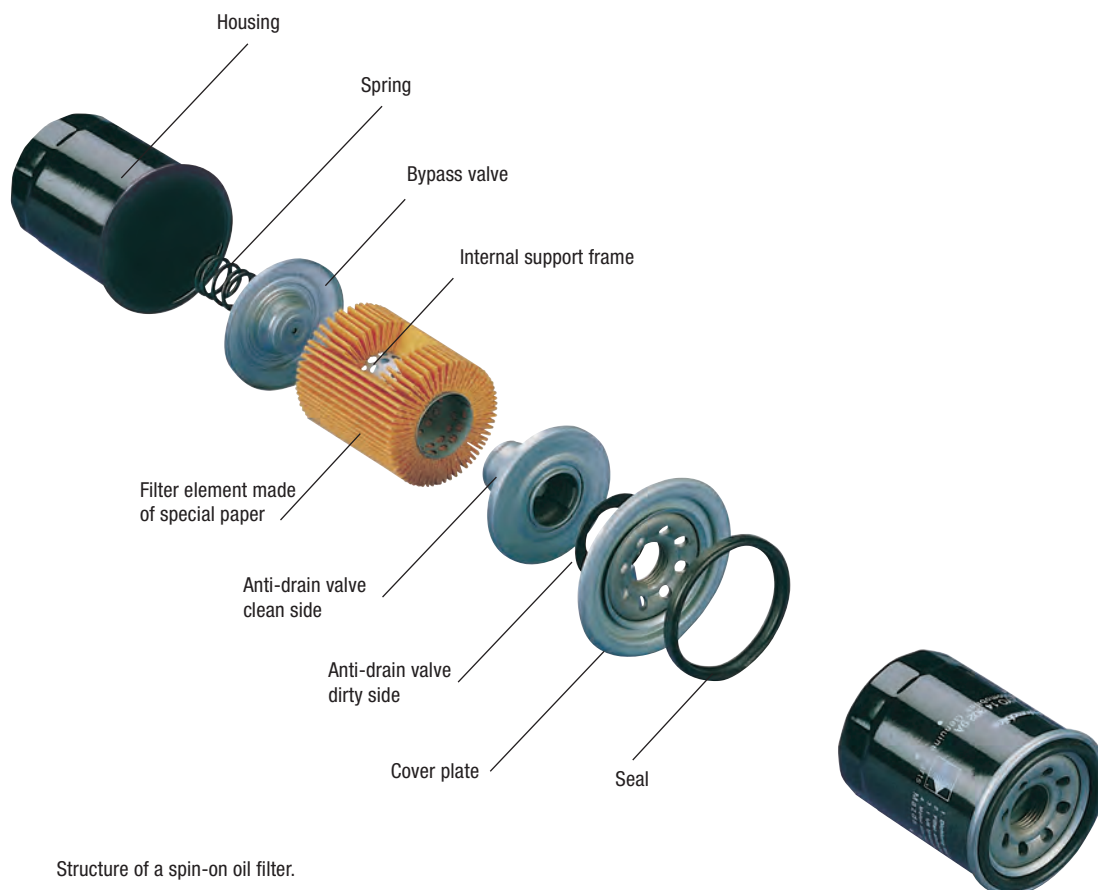

A pressure relief valve guarantees consistent oil flow—even during cold starts, low temperatures, or when the filter is clogged. An anti-drain valve prevents oil from draining when the engine is off, ensuring immediate lubrication at startup. High-grade sealing materials and precision-fit connectors ensure clean separation between filtered and unfiltered oil.

Spin-On Filters (OC)

OC filters feature a durable, powder-coated steel housing with a multi-faced collar for easy replacement. The threaded cover plate and gasket groove simplify installation, while the inner core supports the filter element against oil pressure.

Cartridge Filters (OX)

OX cartridges offer a cost-effective, eco-friendly solution—only the filter element is replaced. Metal-free construction allows for complete incineration, making them ideal for workshop use.

Air filters (LX)

Clean intake air is essential for optimal engine performance, fuel efficiency, and reduced emissions. MAHLE air filters remove up to 99.9% of dust, soot, and tire particles, ensuring a precise air-fuel mixture and protecting critical engine components from premature wear. Their high particle retention capacity guarantees long service life—even under extreme conditions such as heat, cold, or chemical exposure.

Our quality air filters prevent premature wear of the valves, cylinder work surfaces, piston rings, bearings and other engine components. To ensure perfect and lasting filter performance, all filters must be replaced within the replacement intervals stipulated by the car manufacturers.

In passenger cars, round and panel elements are fitted in air filter housings mounted to the engine or chassis and are stabilized with glue beads at the dirty side and support grids at the clean side, depending on the specifications of the car manufacturer. For dust-rich areas, an additional pre-cleaner in the form of a foam mat is placed at the dirty side. For higher surface loads, metal or plastic support studs are used.

In commercial vehicles, robust and at the same time low-weight air filter systems made from recyclable plastic are used that can also reduce air intake noises. In order to achieve a large filter surface at high stability, the filters are mostly cylindrical. To improve efficiency, radial sealing and axial supports are used. Additional safety inserts in the form of special fleece cylinders protect the clean side of the filter element during maintenance and replacements.

Precision-Sealed Air Filters for Reliable Performance

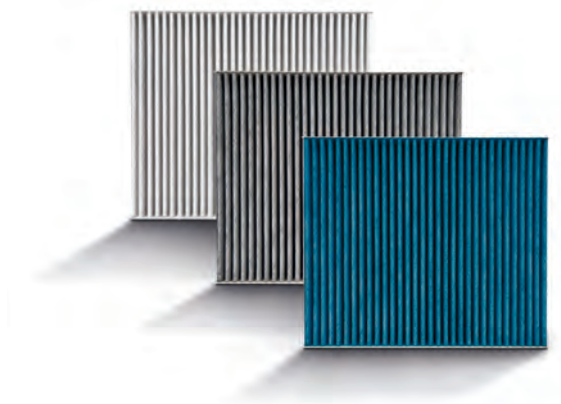

Unfiltered intake air can contaminate the air mass flow meter, disrupting fuel injection and accelerating engine wear. MAHLE air filters are designed for a perfect fit, with carefully selected gaskets that prevent bypass air. Our specially developed PUR foam seals ensure continuous separation between clean and dirty sides. Resistant to aging, chemicals, and temperature fluctuations, these seals maintain flexibility and conform precisely to the sealing geometry for long-lasting performance.

Cabin air filters (LA / LAK)

During one single hour of driving, a volume of up to 100,000 liters of air is blown into the cabin. If the cabin filter becomes clogged or even fails, the pollutant concentration in the passenger compartment can increase to up to six times that of the outside air. MAHLE therefore recommends replacing the filter every 15,000 miles or at least once a year.

Cabin air filter (LA)

MAHLE cabin filters reliably supply the driver and passengers with cleaned air to breathe, thus safeguarding their health, well-being, and power of concentration even in the event of smog or a high pollen count. They also reduce the load on the blower, protect the heating, air conditioning system, and cabin from contamination, and prevent the windows from fogging.

The advantages of our cabin filters' pleat geometry:

- Long service life
- Low flow resistance minimizes the load on the blower
- The accurate fit eliminates bypass air

What's more, our cabin filters don't produce harmful vapors as they're manufactured using solvent-free methods.

Cabin air filters with activated carbon (LAK)

The paper block used in these filters comprises three layers: an activated carbon layer is embedded in two layers of fleece. This keeps out harmful exhaust gases, dirt, dust, and high ozone concentrations, and minimizes odors.

In vehicles with a higher mileage or those operated in heavily polluted surroundings, an additional prefilter (LAP) made of polyester foams or fleece matting is frequently used, which prevents the cabin filter from becoming prematurely clogged—thus considerably extending the service life of our LA/LAK filters.

Extensive protection

MAHLE offers vehicle owners a broad selection of cabin filters and develops these specifically for their individual requirements.

	Pollen	Fine dust	Soot	Tire debris	Industrial dust	Exhaust gases	Ozone	Light odors	Intense odors	Mold	Bacteria	Allergens
LA Good	■	■	■	■	■							
LAK Better	■	■	■	■	■	■	■	■				
LAO CareMetix® Best	■	■	■	■	■	■	■	■	■	■	■	■

■ = Cabin filter without activated carbon

■ = Cabin filter with activated carbon

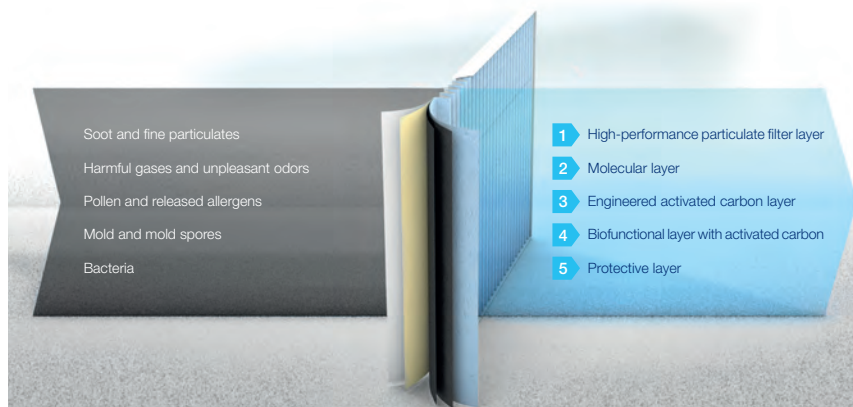

■ = Cabin filter with additional protection against odors

CareMetix[®] cabin air filters (LAO)

Harmful ammonia and sulfur gases—along with unpleasant odors—can develop in traffic jams, tunnels, around large construction sites, sewage treatment plants, or freshly fertilized fields. The new CareMetix[®] cabin filter provides protection through S5 broadband technology. It ensures that fine particulates, pollen, mold, soot, bacteria, and odors don't enter the cabin.

CareMetix[®] (LAO)

When you're on the road, you need clean air to focus and drive safely—and to feel good. But the air we breathe is often polluted with harmful, allergenic substances and odors that conventional filters can't eliminate. The solution: **CareMetix[®]** with S5 broadband technology—5 layers provide 5-fold protection—and also filter out odors!

Protection against soot and fine particulates (PM_{2.5} and PM₁)

Protection against harmful gases and unpleasant odors

Protection against pollen and released allergens

Protection against mold spores

Protection against bacteria

1 Filters out pollen, fine particulates (PM_{2.5}, PM₁), and ultrafine particles (e.g., diesel soot and brake dust)

2 Eliminates unpleasant odors, protects against allergens, and prevents the growth of bacteria and mold almost entirely

3 Highly effective at eliminating harmful gases like hydrocarbons

4 Highly effective at eliminating harmful gases like nitrogen oxides (NO_x) and sulfur dioxide (SO₂)

5 Helps to increase filter stability

Good to know

Cabin filters should be replaced annually or at least every 15,000 miles. This ensures you and your loved ones only breathe in fresh air. **CareMetix[®]** filters are also available for Hybrid and BEV applications.

Fuel filters (KC / KL / KX)

MAHLE fuel filters capture fine contaminants to protect the fuel system from corrosion and ensure smooth engine operation. Pressure regulation and pulsation damping maintain consistent fuel flow, even during cold starts or when filters are clogged. Built to meet strict safety standards, they remain leakproof—even in accidents.

To ensure optimal performance and engine protection, fuel filters must be replaced regularly according to the vehicle manufacturer's recommended service intervals. With high-quality materials and precision engineering, MAHLE fuel filters deliver long-lasting reliability for modern fuel systems.

Spin-on fuel filters (KC)

Simply screwed on to the filter head thread adapter. Mounted elastomer gaskets ensure leaktightness between head and filter.

In-line fuel filters (KL)

These are made from sheet steel with corrosion protection, stainless steel, aluminum, or plastic and are mounted in the fuel line. Optional functions such as pressure regulation, preheating, and water separation are available.

Fuel filter elements (KX)

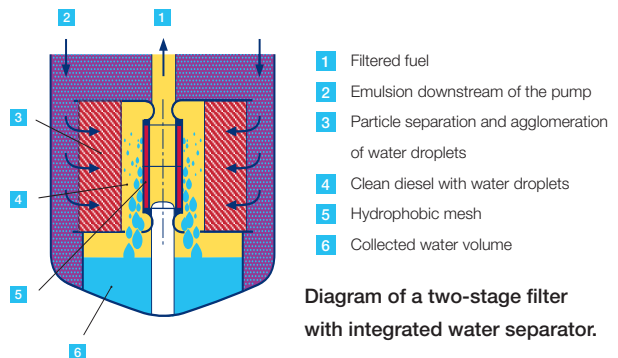

In filter housings that can be opened, only the filter elements are replaced in the service. The housing remains on the engine. This saves material costs and conserves resources.

Diesel fuel filters

To prevent paraffin separation and fuel gelling in cold conditions, MAHLE fuel filters use electric heating elements or recirculate warmed fuel from the engine. Newer systems also efficiently separate water from diesel fuel, protecting the injection system from corrosion and cavitation damage.

Water separation is carried out in two phases:

- **Phase 1:** Fine water droplets are merged into larger ones during particle filtration.
- **Phase 2:** A hydrophobic layer blocks these larger droplets from entering the clean fuel.

New and innovative

MAHLE has developed a patented fuel filter module for commercial vehicles featuring a multistage element that effectively separates water. Solid particles are filtered out first, followed by coalescing microdroplets into larger ones for efficient water removal.

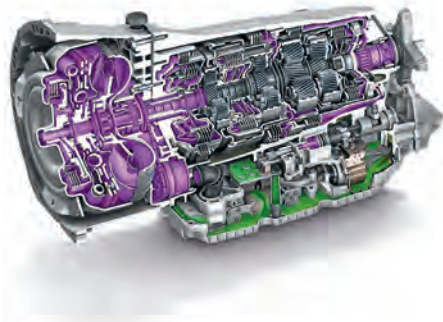

Transmission oil filters (HX)

For a longer transmission life

Just like all operating media in the vehicle, the transmission oil is subject to aging and wear. At extremely high temperatures—caused by sporty driving or towing a trailer, for example—automatic transmission oil can age faster than under normal conditions.

Comparison of oil change methods

■ Static oil change ■ + ■ Dynamic oil change

To prolong the life of increasingly complex automatic transmissions and ensure that they operate smoothly, many vehicle manufacturers are changing their guidelines on transmission oil—moving away from a strategy of filling up to last throughout the service life toward changing it regularly or as needed.

Simply better: dynamic oil change

In a conventional, or static, oil change, approximately 30% to 50% of transmission oil is replaced, and new oil is mixed with old oil in the process. By contrast, up to 100% of the oil is replaced in a dynamic transmission oil change performed with the MAHLE FluidPRO® ATX-280 flushing unit.

Benefits for vehicle owners:

- + Avoids transmission repair costs
- + Significantly improves transmission shifting performance
- + Eliminates minor transmission malfunctions (such as jerking or poor start-up behavior)
- + Extends transmission mileage

MAHLE transmission oil filters

Our transmission oil filters remove abrasion particles from the transmission and provide effective protection against damage. MAHLE already offers suitable solutions for many popular car brands and vehicle types. And our range will continue to expand in the future.

Good to know

As of 2025, over 70% of vehicles sold in the U.S. and Canada come equipped with automatic transmissions as standard, making North America the largest automatic transmission market globally. This dominance is especially pronounced in passenger vehicles, where more than 85% of newly sold cars in the U.S. feature automatic transmissions.

Changing the transmission oil every **30,000 to 60,000 miles** or every **3-5 years** prolongs the service life of complex automatic transmissions and ensures optimal shifting behavior.

Filter media

Our filter media range consists of specially treated papers, fleeces, or multilayer filter media, depending on the specification and application.

Filters made of paper

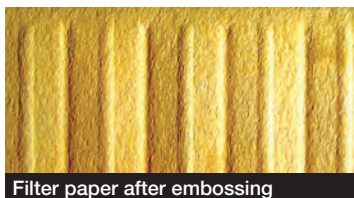

MAHLE paper filters are manufactured using high-quality cellulose fibers impregnated with specialized resins, ensuring durability and consistent performance across a wide range of applications. A precision production process—including

The impregnated cellulose fibers under the microscope

preheating, vertical ridge embossing, pleating, and heat curing—creates a mechanically stable filter medium that resists chemical and thermal stress.

The result is a filter with stable pleat geometry that prevents block formation even under high load conditions, allowing air, oil, fuel, or hydraulic fluid to flow freely. With filtration ratings as low as 1 micron (μm), MAHLE filters deliver superior contaminant removal and extended service life—making them an ideal choice for demanding environments in automotive, industrial, and hydraulic systems.

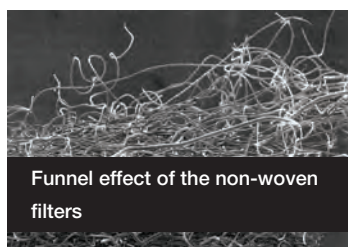

Filter paper after embossing

Ready-pleated paper for use in filters

High-Performance Non-Woven Fleeces

Made from ultra-fine plastic fibers in the micron (μm) range, these fleeces boost filtration efficiency by up to 40%. Layered

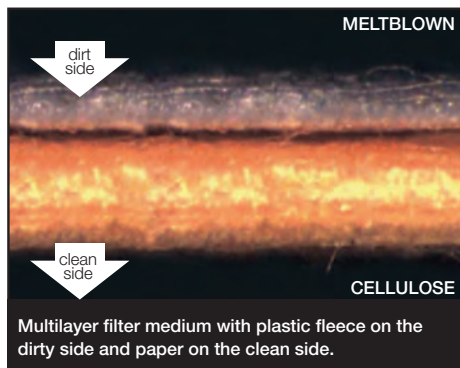

Funnel effect of the non-woven filters

for a “funnel effect,” they achieve up to 99.9% retention with low flow resistance. Trusted across a wide range of applications, they are proven in

cabin, oil, air, and fuel filters—often paired with base paper for added durability. By enhancing contaminant removal and extending service life, non-woven fleeces deliver reliable, high-efficiency filtration for modern systems.

Multilayer filter media

These advanced filter media combine non-woven fleece and paper through a complex production process, offering up to 40% higher absorption capacity than conventional paper filters. Capable of filtering particles as small as 3–5 microns (μm), they are ideal for modern diesel fuel injection systems—including turbo diesel direct injection, common rail, and pump injector technologies—where high efficiency and durability are essential.

Preface

Dear Automotive Professionals,

There is no such thing as real heroes? Well, MAHLE likes to offer you a different opinion!

Your work is the backbone of the aftermarket industry. Every day, you ensure that vehicles run efficiently, safely, and reliably. At MAHLE, we understand the importance of high-quality products in your daily operations – that is why we are committed to providing you with the best aftermarket solutions that meet the highest standards.

This catalog is designed to help you quickly find the right MAHLE parts and tools for your repairs – right where you need it. Our full-service offering ranges from filtration and thermal management to powertrain components, electrics as well as repair shop equipment and diagnostics. MAHLE Lifecycle and Mobility aims to make your job easier by providing precision-engineered products according to the specifications of vehicle manufacturers that fit perfectly and perform flawlessly.

We know that in your line of work, time is valuable. Therefore, we continue to enhance our range, streamline our cataloguing, and support you with the latest technical insights. Whether you are servicing passenger cars or commercial vehicles, if you focus on industrial engines, construction or agricultural applications – you can trust MAHLE for innovative and reliable solutions.

“

Thank you for your dedication and expertise. We are proud to support you in getting vehicles back on the road and keeping customers mobile and satisfied.

Philipp Grosse Kleimann

Philipp Grosse Kleimann

Member of the MAHLE Management Committee and
Head of the Lifecycle and Mobility business unit

The inside covers of our catalog show the “MAHLE Repair Shop Heroes,” the newest international campaign from MAHLE Lifecycle and Mobility. It uses Hollywood glitz, glamour and

blockbuster titles to place technicians – and their products and services – directly in the spotlight. Examples of the imagery of the new MAHLE campaign can be found below.

“The Theronator” highlights the wide range of MAHLE thermal management products and services.

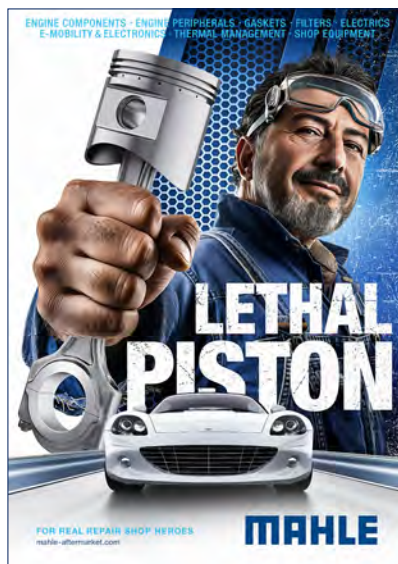

“The Filter and the Furious” is a tribute to the comprehensive range of MAHLE Lifecycle and Mobility filters.

All In: MAHLE compressors don't put you under pressure and there is no need to bluff, because you always have the best in your hands.

MAHLE gaskets are made for extreme temperatures and high internal pressures, like out of another galaxy.

MAHLE pistons are as tough as nails: top quality and a wide range of piston types for every engine type, products and services.

MAHLE sends this message to all technicians out there: “No matter what kind of problem, we're here for you - also off-road!”

Heures : de 8 h 30 à 18 h (heure de l'Est), du lundi au vendredi

L'utilisation des produits suivants : coussinets de moteur CLEVITE®, joints MAHLE®, pistons et segments de piston, filtres, ainsi que les produits de refroidissement moteur et de climatisation BEHR®, dans des aéronefs ou tout autre équipement spécialisé, peut contrevenir aux lois, règles et règlements des agences réglementaires locales, provinciales ou fédérales.

Ces produits sont exclusivement destinés à des applications automobiles. En aucun cas ces produits ne doivent être utilisés dans des applications non automobiles, y compris, sans s'y limiter, les moteurs d'aéronefs, les équipements médicaux, les dispositifs ou réacteurs liés à l'énergie atomique.

Les lois fédérales, provinciales et locales interdisent le retrait, la neutralisation ou, dans certains cas, la modification des dispositifs ou systèmes d'émission installés en usine. La Californie restreint l'utilisation de pièces pouvant augmenter

les émissions des véhicules conçus pour circuler sur les voies publiques. La vente ou l'installation sur des véhicules soumis au contrôle des émissions de certains composants non approuvés par le California Air Resources Board, qui modifient la conception ou la performance du système de contrôle des émissions d'origine, est interdite.

Certaines pièces listées et proposées dans ce catalogue peuvent être soumises à ces restrictions. Ces pièces sont uniquement destinées à une utilisation sur des véhicules hors route participant à des compétitions ou sur d'autres types de véhicules exemptés des lois applicables sur le contrôle des émissions. L'installation de ces pièces sur des véhicules soumis à ces lois peut être interdite.

MAHLE Lifecycle & Mobility recommande de consulter les lois applicables sur le contrôle des émissions avant d'envisager l'installation de pièces additionnelles ou modifiées.

Les filtres ont une longue tradition chez nous.

MAHLE – historiquement un développeur de composants de moteur – a su reconnaître à temps l'importance cruciale de filtres fonctionnant de manière optimale pour les différents circuits de fluides de service. En effet, chaque combustion dépend de la qualité des filtres en amont – qu'il s'agisse de l'huile, du carburant ou de l'air d'admission à purifier. Et puisque la santé dépend aussi de l'air que nous respirons, les filtres d'habitacle font partie intégrante de notre programme.

MAHLE propose un programme complet de filtres pour les voitures particulières (VÉB, hybrides et moteurs thermiques), les véhicules commerciaux, les machines agricoles et de construction, ainsi que les motocyclettes. En tant que partenaire

de développement innovant de l'industrie automobile, nous fabriquons des filtres et des systèmes de filtration parfaitement adaptés aux caractéristiques des moteurs, aux conditions d'assemblage et aux différentes applications. Nos partenaires en réparation bénéficient de filtres de qualité équivalente à celle de l'équipement d'origine pour l'huile, l'air et le carburant, avec des cartouches filtrantes écologiques, des canisters au charbon actif, des dessiccateurs d'air, des séparateurs d'huile, des filtres hydrauliques et des filtres d'habitacle, qui peuvent également être installés en retrofit sur certains véhicules.

www.mahle-aftermarket.com

Filtres à huile (OX / OC)

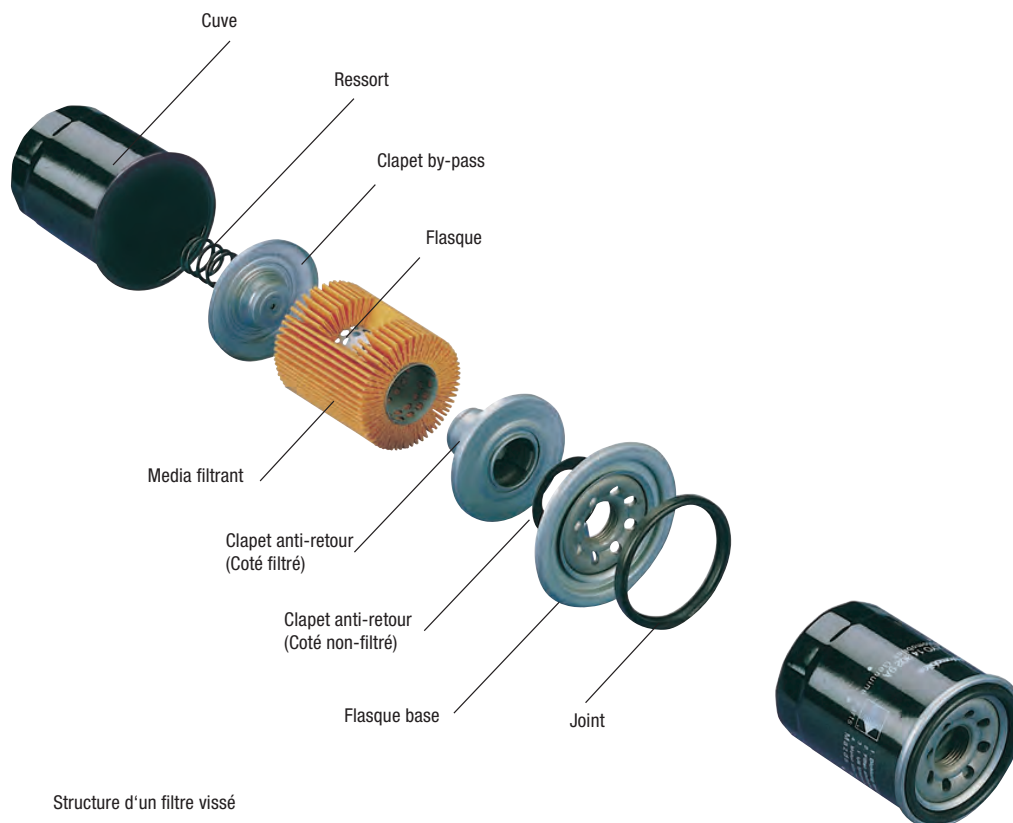

L'huile moteur est constamment exposée à des contaminants tels que les résidus de combustion, la poussière, la suie et les particules métalliques, qui accélèrent l'usure du moteur. Les filtres à huile MAHLE préservent la pureté de l'huile et protègent les composants du moteur en éliminant efficacement ces particules. La géométrie stable des plis garantit une performance fiable même lors des démarrages à froid, tandis que le boîtier résistant à haute pression supporte des pics de charge allant jusqu'à 20 bars. Une soupape de décharge de pression assure un débit d'huile constant – même lors des démarrages à froid, par basses températures ou en cas d'obstruction du filtre. Une soupape anti-retour empêche l'huile de s'écouler lorsque le moteur est à l'arrêt, assurant ainsi une lubrification immédiate au démarrage. Des matériaux d'étanchéité de haute qualité et des raccords ajustés avec précision garantissent une séparation propre entre l'huile filtrée et non filtrée.

Filtres à huile (Spin-On) (OC)

OC filters feature a durable, powder-coated steel housing with a multi-faced collar for easy replacement. The threaded cover plate and gasket groove simplify installation, while the inner core supports the filter element against oil pressure.

Filtres à huile (Cartouche) (OX)

OX cartridges offer a cost-effective, eco-friendly solution—only the filter element is replaced. Metal-free construction allows for complete incineration, making them ideal for workshop use.

Structure d'un filtre vissé

Filtres à air (LX)

Un air d'admission propre est essentiel pour une performance optimale du moteur, une meilleure efficacité énergétique et une réduction des émissions. Les filtres à air MAHLE éliminent jusqu'à 99,9 % de la poussière, de la suie et des particules de pneus, assurant un mélange air-carburant précis et protégeant les composants critiques du moteur contre l'usure prématurée. Leur grande capacité de rétention des particules garantit une longue durée de vie – même dans des conditions extrêmes telles que la chaleur, le froid ou l'exposition à des produits chimiques.

Nos filtres à air de qualité préviennent l'usure prématurée des soupapes, des surfaces de travail des cylindres, des segments de piston, des roulements et d'autres composants du moteur. Pour garantir une performance de filtration parfaite et durable, tous les filtres doivent être remplacés selon les intervalles prévus par les constructeurs automobiles.

Dans les voitures particulières, des éléments ronds ou plats sont installés dans des boîtiers de filtre à air fixés au moteur ou au châssis. Ils sont stabilisés par des cordons de colle du côté souillé et des grilles de support du côté propre,

selon les spécifications du constructeur. Dans les zones très poussiéreuses, un préfiltre supplémentaire sous forme de tapis en mousse est placé du côté souillé. Pour les charges de surface élevées, des tiges de support en métal ou en plastique sont utilisées.

Dans les véhicules commerciaux, des systèmes de filtration d'air robustes et légers, fabriqués en plastique recyclable, sont utilisés. Ils permettent également de réduire les bruits d'admission d'air. Afin d'obtenir une grande surface de filtration avec une stabilité élevée, les filtres sont généralement cylindriques. Pour améliorer l'efficacité, des joints radiaux et des supports axiaux sont utilisés. Des inserts de sécurité supplémentaires, sous forme de cylindres en non-tissé spécial, protègent le côté propre de l'élément filtrant lors de l'entretien et du remplacement.

Filtres à air à étanchéité de précision pour une performance fiable

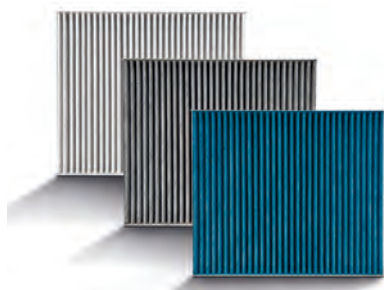

Un air d'admission non filtré peut contaminer le capteur de débit massique d'air, perturber l'injection de carburant et accélérer l'usure du moteur. Les filtres à air MAHLE sont conçus pour un ajustement parfait, avec des joints soigneusement sélectionnés qui empêchent les fuites d'air. Nos joints en mousse PUR spécialement développés assurent une séparation continue entre les côtés propre et souillé. Résistants au vieillissement, aux produits chimiques et aux variations de température, ces joints conservent leur flexibilité et s'adaptent précisément à la géométrie d'étanchéité pour une performance durable.

Filtres d'habitacle (LA / LAK)

En une seule heure de conduite, jusqu'à 100 000 litres d'air peuvent être soufflés dans l'habitacle. Si le filtre d'habitacle est obstrué ou défectueux, la concentration de polluants dans le compartiment passagers peut atteindre jusqu'à six fois celle de l'air extérieur. MAHLE recommande donc de remplacer le filtre tous les 15 000 milles ou au moins une fois par an.

Filtre d'habitacle (LA)

Les filtres d'habitacle MAHLE fournissent de manière fiable de l'air purifié au conducteur et aux passagers, préservant ainsi leur santé, leur bien-être et leur concentration, même en cas de smog ou de forte concentration de pollen. Ils réduisent également la charge sur le ventilateur, protègent le système de chauffage et de climatisation ainsi que l'habitacle contre les contaminants, et empêchent la formation de buée sur les vitres.

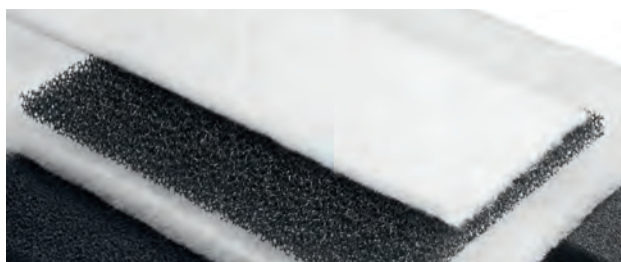

Les avantages de la géométrie des plis de nos filtres d'habitacle :

- Longue durée de vie
- Faible résistance à l'écoulement, ce qui réduit la charge sur le ventilateur
- Ajustement précis éliminant les fuites d'air

De plus, nos filtres d'habitacle ne produisent pas de vapeurs nocives puisqu'ils sont fabriqués selon des procédés sans solvants.

Filtres d'habitacle avec charbon actif (LAK)

Le bloc de papier utilisé dans ces filtres comprend trois couches : une couche de charbon actif est insérée entre deux couches de non-tissé. Cela permet de bloquer les gaz d'échappement nocifs, la saleté, la poussière et les fortes concentrations d'ozone, tout en réduisant les odeurs.

Dans les véhicules ayant un kilométrage élevé ou circulant dans des environnements fortement pollués, un préfiltre supplémentaire (LAP) en mousse de polyester ou en nappe de non-tissé est souvent utilisé. Celui-ci empêche l'obstruction prématurée du filtre d'habitacle, ce qui prolonge considérablement la durée de vie de nos filtres LA/LAK.

Protection étendue

MAHLE offre aux propriétaires de véhicules un large choix de filtres d'habitacle et les développe spécifiquement selon leurs besoins individuels.

	Pollen	Poussière fine	Sûte	Débris de pneus	Poussière industrielle	Gaz d'échappement	Ozone	Odeurs légères	Odeurs fortes	Moissure	Bactéries	Allergènes
LA Bien	■	■	■	■	■							
LAK Mieux	■	■	■	■	■	■	■					
LAO CareMetix® Le meilleur	■	■	■	■	■	■	■	■	■	■	■	■

■ = Filtre d'habitacle sans charbon actif

■ = Filtre d'habitacle avec charbon actif

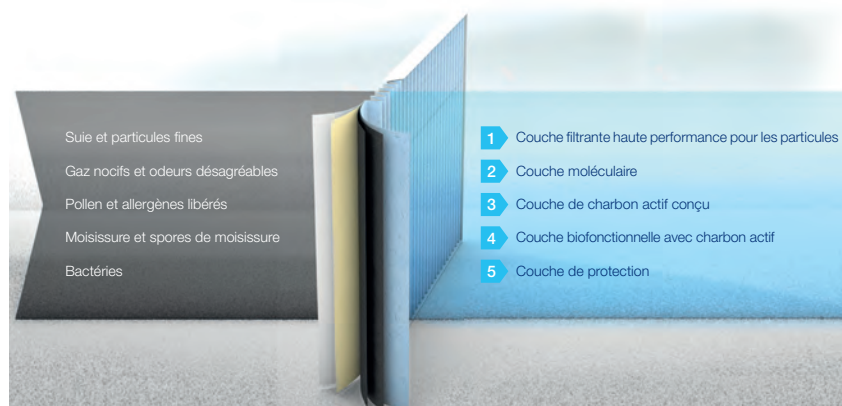

■ = Filtre d'habitacle avec protection supplémentaire contre les odeurs

Les filtres d'habitacle CareMetix (LAO)

Les gaz nocifs comme l'ammoniac et le soufre — ainsi que les odeurs désagréables — peuvent se développer dans les embouteillages, les tunnels, près des grands chantiers, des stations d'épuration ou des champs fraîchement fertilisés. Le nouveau filtre d'habitacle CareMetix® offre une protection grâce à la technologie à large spectre S5. Il garantit que les particules fines, le pollen, la moisissure, la suie, les bactéries et les odeurs ne pénètrent pas dans l'habitacle

CareMetix® (LAO)

Sur la route, vous avez besoin d'air pur pour rester concentré, conduire en toute sécurité — et vous sentir bien. Mais l'air que nous respirons est souvent pollué par des substances nocives, allergènes et des odeurs que les filtres conventionnels ne peuvent pas éliminer. La solution : **CareMetix®** avec la technologie à large spectre S5 — 5 couches offrent une protection quintuple — et filtrent aussi les odeurs !

1 Filtre le pollen, les particules fines (PM2.5, PM1) et les particules ultra-fines (comme la suie de diesel et la poussière de freins)

2 Élimine les odeurs désagréables, protège contre les allergènes et empêche presque entièrement la prolifération des bactéries et de la moisissure

3 Très efficace pour éliminer les gaz nocifs comme les hydrocarbures

4 Très efficace pour éliminer les gaz nocifs comme les oxydes d'azote (NO_x) et le dioxyde de soufre (SO₂)

5 Aide à augmenter la stabilité du filtre

Protection contre la suie et les particules fines (PM2.5 et PM1)

Protection contre les gaz nocifs et les odeurs désagréables

Protection contre le pollen et les allergènes libérés

Protection contre les spores de moisissure

Protection contre les bactéries

Bon à savoir

Les filtres d'habitacle devraient être remplacés chaque année ou au moins tous les 15 000 milles. Cela garantit que vous et vos proches ne respirez que de l'air frais. Les filtres **CareMetix®** sont également disponibles pour les véhicules hybrides et électriques (VÉ).

Filtres à carburant (KC / KL / KX)

Les filtres à carburant MAHLE capturent les contaminants fins pour protéger le système d'alimentation contre la corrosion et assurer un fonctionnement fluide du moteur. La régulation de la pression et l'amortissement des pulsations maintiennent un débit de carburant constant, même lors des démarrages à froid ou lorsque les filtres sont obstrués. Conçus pour répondre à des normes de sécurité strictes, ils restent étanches — même en cas d'accident.

Pour garantir une performance optimale et une protection du moteur, les filtres à carburant doivent être remplacés régulièrement selon les intervalles d'entretien recommandés par le constructeur du véhicule. Grâce à des matériaux de haute qualité et une ingénierie de précision, les filtres à carburant MAHLE offrent une fiabilité durable pour les systèmes d'alimentation modernes.

Filtres à carburant vissables (KC)

Se vissent simplement sur l'adaptateur fileté de la tête de filtre. Des joints en élastomère montés assurent l'étanchéité entre la tête et le filtre.

Filtres à carburant en ligne (KL)

Fabriqués en tôle avec protection contre la corrosion, en acier inoxydable, en aluminium ou en plastique, ils sont montés directement dans la conduite de carburant. Des fonctions optionnelles comme la régulation de la pression, le préchauffage et la séparation de l'eau sont disponibles.

Éléments de filtre à carburant (KX)

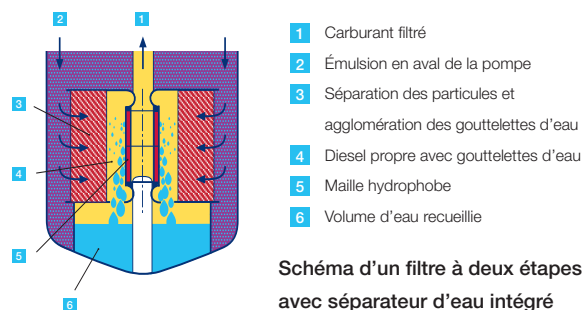

Dans les boîtiers de filtre pouvant être ouverts, seuls les éléments filtrants sont remplacés lors de l'entretien. Le boîtier reste fixé au moteur. Cela permet de réduire les coûts de matériaux et de préserver les ressources.

Filtres à carburant diesel

Pour éviter la séparation de la paraffine et la gélification du carburant par temps froid, les filtres à carburant MAHLE utilisent des éléments chauffants électriques ou font recirculer le carburant réchauffé provenant du moteur. Les systèmes plus récents séparent également efficacement l'eau du carburant diesel, protégeant ainsi le système d'injection contre la corrosion et les dommages causés par la cavitation.

La séparation de l'eau s'effectue en deux phases :

- **Phase 1** : Les fines gouttelettes d'eau sont regroupées en gouttelettes plus grosses lors de la filtration des particules.
- **Phase 2** : Une couche hydrophobe empêche ces grosses gouttelettes de pénétrer dans le carburant propre.

Nouveau et innovant

MAHLE a développé un module de filtre à carburant breveté pour véhicules commerciaux, doté d'un élément à plusieurs étapes qui permet de séparer efficacement l'eau. Les particules solides sont d'abord filtrées, puis les microgouttelettes sont coalescées en gouttes plus grosses pour faciliter l'élimination de l'eau.

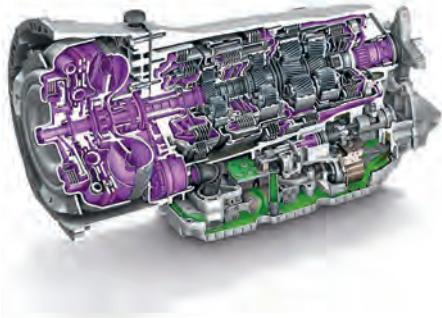

Filtres à huile de transmission (HX)

Pour une durée de vie plus longue de la transmission

Comme tous les fluides utilisés dans un véhicule, l'huile de transmission est sujette au vieillissement et à l'usure. À des températures extrêmement élevées — causées par une conduite sportive ou le remorquage d'une remorque, par exemple — l'huile de transmission automatique peut vieillir plus rapidement que dans des conditions normales.

Comparaison des méthodes de vidange d'huile

■ Vidange d'huile statique

■ + ■ Vidange d'huile dynamique

Pour prolonger la durée de vie des transmissions automatiques de plus en plus complexes et assurer leur bon fonctionnement, de nombreux constructeurs automobiles modifient leurs recommandations concernant l'huile de transmission — en abandonnant la stratégie du remplissage à vie au profit d'un remplacement régulier ou selon les besoins.

Simplement mieux : la vidange dynamique

Lors d'une vidange d'huile conventionnelle (statique), environ 30 % à 50 % de l'huile de transmission est remplacée, et la nouvelle huile se mélange à l'ancienne. En revanche, jusqu'à 100 % de l'huile est remplacée lors d'une vidange dynamique effectuée avec l'unité de rinçage MAHLE FluidPRO® ATX-280.

Avantages pour les propriétaires de véhicules :

- + Évite les coûts de réparation de la transmission
- + Améliore considérablement la performance du changement de vitesses
- + Élimine les dysfonctionnements mineurs de la transmission (comme les à-coups ou les démarrages difficiles)
- + Prolonge la durée de vie de la transmission

Filtres à huile de transmission MAHLE

Nos filtres à huile de transmission éliminent les particules d'abrasion de la transmission et offrent une protection efficace contre les dommages. MAHLE propose déjà des solutions adaptées à de nombreuses marques et types de véhicules populaires. Et notre gamme continuera de s'élargir à l'avenir.

Bon à savoir

À partir de 2025, plus de 70 % des véhicules vendus aux États-Unis et au Canada sont équipés de transmissions automatiques de série, faisant de l'Amérique du Nord le plus grand marché mondial pour les transmissions automatiques. Cette domination est particulièrement marquée dans les véhicules de tourisme, où plus de 85 % des voitures neuves vendues aux États-Unis sont dotées de transmissions automatiques.

Changer l'huile de transmission tous les **30 000 à 60 000 milles** ou tous les **3 à 5 ans** prolonge la durée de vie des transmissions automatiques complexes et assure un comportement optimal lors du changement de vitesses.

Milieu filtrant

Notre gamme de médias filtrants se compose de papiers spécialement traités, de non-tissés ou de médias filtrants multicouches, selon les spécifications et les applications.

Filtres en papier

Les filtres en papier MAHLE sont fabriqués à partir de fibres de cellulose de haute qualité imprégnées de résines spécialisées, assurant durabilité et performance constante dans une large gamme d'applications. Un processus de fabrication précis —

Les fibres de cellulose imprégnées vues au microscope

incluant le préchauffage, l'embossage de nervures verticales, le pliage et la polymérisation thermique — permet de créer un média filtrant mécaniquement stable, résistant aux contraintes chimiques et thermiques.

Le résultat : un filtre avec une géométrie de plis stable qui empêche la formation de blocs même sous forte charge, permettant à l'air, à l'huile, au carburant ou au fluide hydraulique de circuler librement. Avec des capacités de filtration allant jusqu'à 1 micron (μm), les filtres MAHLE offrent une élimination supérieure des contaminants et une durée de vie prolongée — ce qui en fait un choix idéal pour les environnements exigeants dans les systèmes automobiles, industriels et hydrauliques.

Papier filtrant après embossage

Papier pré-plié prêt à être utilisé dans les filtres.

Non-tissés haute performance

Fabriqués à partir de fibres plastiques ultra-fines dans la gamme du micron (μm), ces non-tissés augmentent l'efficacité de

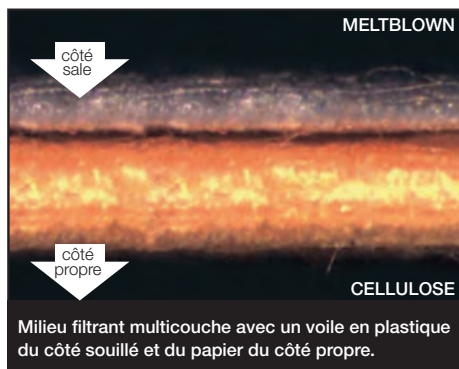

Effet entonnoir des filtres en non-tissé

filtration jusqu'à 40 %. Superposés pour créer un « effet entonnoir », ils atteignent jusqu'à 99,9 % de rétention avec une faible

résistance à l'écoulement. Fiabiles dans une large gamme d'applications, ils sont éprouvés dans les filtres d'habitacle, d'huile, d'air et de carburant — souvent combinés à du papier de base pour une durabilité accrue. En améliorant l'élimination des contaminants et en prolongeant la durée de vie, les non-tissés offrent une filtration fiable et efficace pour les systèmes modernes.

Médias filtrants multicouches

Ces médias filtrants avancés combinent non-tissé et papier à travers un processus de fabrication complexe, offrant jusqu'à 40 % de capacité d'absorption en plus par rapport aux filtres en papier conventionnels. Capables de filtrer des particules aussi petites que 3 à 5 microns (μm), ils sont idéaux pour les systèmes modernes d'injection de carburant diesel — y compris l'injection directe turbo diesel, le common rail et les technologies d'injecteurs-pompes — où efficacité et durabilité sont essentielles.

Milieu filtrant multicouche avec un voile en plastique du côté souillé et du papier du côté propre.

Préface

Chers professionnels de l'automobile,

Y a-t-il pas de vrais héros ? Eh bien, MAHLE aime vous donner un avis différent !

Votre travail est l'épine dorsale de l'industrie du marché secondaire. Chaque jour, vous vous assurez que les véhicules fonctionnent de manière efficace, sécuritaire et fiable. Chez MAHLE, nous comprenons l'importance de produits de haute qualité dans vos opérations quotidiennes. C'est pourquoi nous nous engageons à vous fournir les meilleures solutions de rechange qui répondent aux normes les plus élevées.

Ce catalogue est conçu pour vous aider à trouver rapidement les pièces et outils MAHLE adaptés à vos réparations, là où vous en avez besoin. Notre offre de services complets s'étend de la filtration et de la gestion thermique aux composants du groupe motopropulseur, à l'électricité ainsi qu'aux équipements d'atelier de réparation et aux diagnostics. MAHLE Lifecycle and Mobility vise à vous faciliter la tâche en vous fournissant des produits conçus avec précision selon les spécifications des constructeurs automobiles, qui s'adaptent parfaitement et fonctionnent parfaitement.

Nous savons que dans votre domaine d'activité, le temps est précieux. C'est pourquoi nous continuons d'améliorer notre gamme, de rationaliser notre catalogage et de vous accompagner avec les dernières connaissances techniques. Que vous entreteniez des voitures particulières ou des véhicules utilitaires, que vous vous concentriez sur les moteurs industriels, la construction ou les applications agricoles, vous pouvez faire confiance à MAHLE pour des solutions novatrices et fiables.

“

Merci de votre dévouement et de votre expertise. Nous sommes fiers de vous aider à remettre vos véhicules sur la route et à maintenir la mobilité et la satisfaction de vos clients.

Philipp Grosse Kleimann

Philipp Grosse Kleimann

Membre du comité de direction de MAHLE et responsable de l'unité commerciale Lifecycle and Mobility.

Les couvertures intérieures de notre catalogue présentent les « MAHLE Repair Shop Heroes », la toute nouvelle campagne internationale de MAHLE Lifecycle and Mobility. Il utilise les paillettes, le glamour et les titres à succès d'Hollywood

pour placer les mécaniciens – et leurs produits et services – directement sous les projecteurs. Vous trouverez ci-dessous des exemples d'images de la nouvelle campagne MAHLE.

« Le Thermonator » met en valeur la vaste gamme de produits et services de gestion thermique MAHLE.

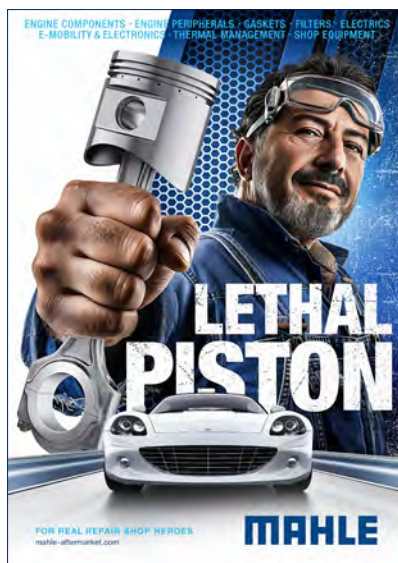

« The Filter and the Furious » est un hommage à la gamme complète de filtres MAHLE Lifecycle and Mobility.

Tout compris : les compresseurs MAHLE ne vous mettent pas sous pression et il n'est pas nécessaire de bluffer, car vous avez toujours le meilleur entre vos mains..

Les joints MAHLE sont conçus pour des températures extrêmes et des pressions internes élevées, comme s'ils sortaient d'une autre galaxie.

Les pistons MAHLE sont aussi résistants que des clous : qualité supérieure et large gamme de types de pistons pour chaque type de moteur. Produits et services.

MAHLE envoie ce message à tous les mécaniciens : « Peu importe le type de problème, on est là pour vous, même en tout-terrain ! »

El uso de cojinetes de motor CLEVITE®, empaques, pistones y anillos de pistón MAHLE®, filtros y productos de enfriamiento del motor y aire acondicionado BEHR® en aeronaves u otros equipos especiales puede constituir una violación de las leyes, normas y reglamentos de agencias reguladoras locales, estatales o federales.

Estos productos están destinados exclusivamente para aplicaciones automotrices. Bajo ninguna circunstancia deben utilizarse en aplicaciones no automotrices, incluyendo, sin limitación, motores de aeronaves, equipos médicos, dispositivos o reactores de energía atómica.

Las leyes federales, estatales y locales restringen la remoción, desactivación o, en algunos casos, la modificación de dispositivos o sistemas de emisiones instalados de fábrica. California restringe el uso de piezas que puedan aumentar las emisiones en vehículos

diseñados para su uso en calles o carreteras públicas. La venta o instalación en vehículos con control de emisiones de ciertos componentes de control de emisiones no aprobados por la Junta de Recursos del Aire de California, que alteren o modifiquen el diseño o rendimiento original del sistema de control de emisiones de dicho vehículo, está prohibida. Algunas de las piezas listadas y ofrecidas en este catálogo pueden estar sujetas a las restricciones mencionadas. Dichas piezas están destinadas únicamente para su uso en vehículos todoterreno que compiten en eventos competitivos u otros tipos de vehículos exentos de las leyes de control de emisiones aplicables. La instalación de estas piezas en vehículos sujetos a leyes de control de emisiones puede estar prohibida.

MAHLE Lifecycle & Mobility recomienda revisar las leyes de control de emisiones aplicables antes de considerar la instalación de piezas adicionales o modificadas.

Los filtros tienen una larga tradición con nosotros.

MAHLE – históricamente un desarrollador de componentes de motor – ha reconocido a tiempo la importancia de contar con filtros que funcionen de manera óptima para los distintos circuitos de medios de servicio. Después de todo, cada combustión solo es tan buena como los filtros que la preceden, ya sea que se trate de limpiar el aceite, el combustible o el aire de admisión. Y dado que las personas solo se mantienen saludables cuando respiran aire limpio, los filtros de aire para cabina son una parte importante de nuestro programa.

MAHLE cuenta con un programa integral de filtros para automóviles de pasajeros (eléctricos a batería, híbridos y de combustión interna), vehículos comerciales, maquinaria agrícola y de construcción, así como motocicletas. Como

socio innovador en el desarrollo de la industria automotriz, fabricamos filtros y sistemas de filtración que se adaptan de manera óptima a las características del motor, las condiciones de montaje y las aplicaciones. Nuestros socios en el sector de reparación se benefician de esto con filtros de calidad de equipo original para aceite, aire y combustible, con cartuchos de filtro ecológicos, canisters de carbón activado, secadores de aire, separadores de aceite, filtros hidráulicos y filtros de aire para cabina, que también pueden instalarse posteriormente en ciertos vehículos.

www.mahle-aftermarket.com

Filtros de aceite (OX / OC)

El aceite del motor está constantemente expuesto a contaminantes como residuos de combustión, polvo, hollín y partículas metálicas, que aceleran el desgaste del motor. Los filtros de aceite MAHLE mantienen la pureza del aceite y protegen los componentes del motor al eliminar de forma confiable estas partículas. La geometría estable del pliegue garantiza estabilidad durante el arranque en frío, mientras que la carcasa resistente a alta presión soporta picos de carga de hasta 20 bar.

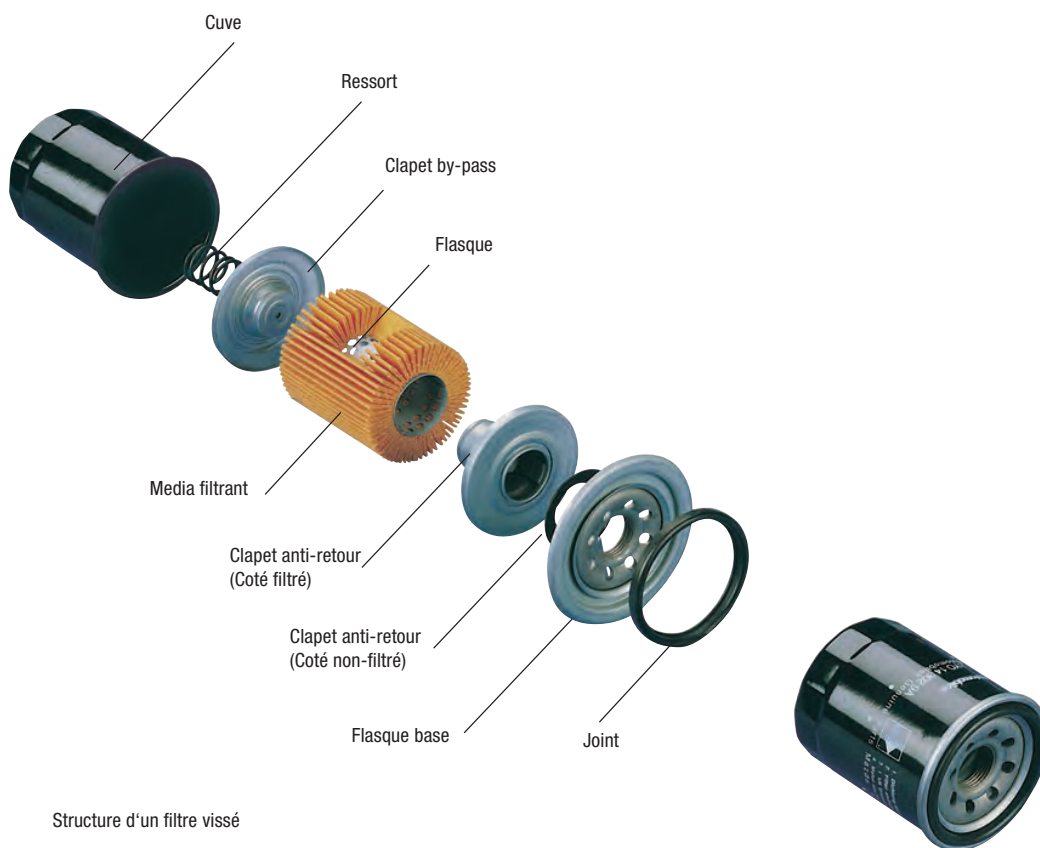

Una válvula de alivio de presión garantiza un flujo constante de aceite, incluso durante arranques en frío, temperaturas bajas o cuando el filtro está obstruido. Una válvula antirretorno evita que el aceite se drene cuando el motor está apagado, asegurando una lubricación inmediata al encender el motor. Los materiales de sellado de alta calidad y los conectores de ajuste preciso aseguran una separación limpia entre el aceite filtrado y el no filtrado.

Filtros de rosca (OC)

Los filtros OC cuentan con una carcasa de acero duradera con recubrimiento en polvo y un collar multifacético para facilitar su reemplazo. La placa de cubierta roscada y la ranura para la junta facilitan la instalación, mientras que el núcleo interno sostiene el elemento filtrante frente a la presión del aceite.

Filtros de cartucho (OX)

Los cartuchos OX ofrecen una solución rentable y ecológica: solo se reemplaza el elemento filtrante. Su construcción sin metal permite una incineración completa, lo que los hace ideales para su uso en talleres.

Filtros de aire (LX)

El aire de admisión limpio es esencial para un rendimiento óptimo del motor, una mayor eficiencia del combustible y una reducción de las emisiones. Los filtros de aire MAHLE eliminan hasta el 99.9% del polvo, hollín y partículas de neumáticos, garantizando una mezcla precisa de aire y combustible, y protegiendo los componentes críticos del motor contra el desgaste prematuro. Su alta capacidad de retención de partículas asegura una larga vida útil, incluso en condiciones extremas como calor, frío o exposición a productos químicos.

Nuestros filtros de aire de alta calidad previenen el desgaste prematuro de válvulas, superficies de trabajo de los cilindros, aros de pistón, cojinetes y otros componentes del motor. Para asegurar un rendimiento perfecto y duradero del filtro, todos los filtros deben reemplazarse dentro de los intervalos de cambio estipulados por los fabricantes de automóviles.

En los automóviles de pasajeros, los elementos redondos y planos se colocan en carcasas de filtro de aire montadas en el motor o en el chasis, y se estabilizan con cordones de

pegamento en el lado sucio y rejillas de soporte en el lado limpio, según las especificaciones del fabricante. Para zonas con alta concentración de polvo, se coloca un prefiltro adicional en forma de alfombrilla de espuma en el lado sucio. Para cargas superficiales más altas, se utilizan soportes de metal o plástico.

En vehículos comerciales, se utilizan sistemas de filtración de aire robustos y a la vez ligeros, fabricados con plástico reciclable, que también pueden reducir el ruido de admisión de aire. Para lograr una gran superficie de filtrado con alta estabilidad, los filtros suelen ser cilíndricos. Para mejorar la eficiencia, se utilizan sellos radiales y soportes axiales. Inserciones de seguridad adicionales en forma de cilindros de vellón especial protegen el lado limpio del elemento filtrante durante el mantenimiento y los reemplazos.

Filtros de aire con sellado de precisión para un rendimiento confiable

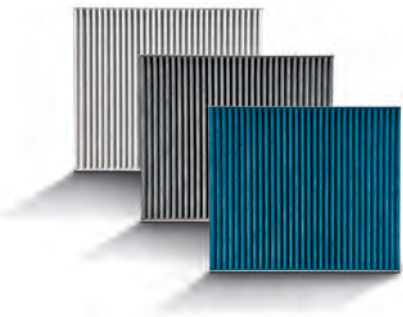

El aire de admisión no filtrado puede contaminar el medidor de masa de aire, alterar la inyección de combustible y acelerar el desgaste del motor. Los filtros de aire MAHLE están diseñados para un ajuste perfecto, con juntas cuidadosamente seleccionadas que evitan el paso de aire no filtrado. Nuestras juntas de espuma PUR especialmente desarrolladas aseguran una separación continua entre los lados limpio y sucio. Resistentes al envejecimiento, a los productos químicos y a las fluctuaciones de temperatura, estas juntas mantienen su flexibilidad y se adaptan con precisión a la geometría de sellado para un rendimiento duradero.

Filtros de aire para cabina (LA / LAK)

Durante una sola hora de conducción, se introduce en el habitáculo un volumen de hasta 100,000 litros de aire. Si el filtro de cabina se obstruye o falla, la concentración de contaminantes en el interior del vehículo puede llegar a ser hasta seis veces mayor que la del aire exterior. Por ello, MAHLE recomienda reemplazar el filtro cada 15,000 millas o al menos una vez al año.

Filtro de cabina (LA)

Los filtros de cabina MAHLE suministran aire limpio de forma confiable al conductor y a los pasajeros, protegiendo así su salud, bienestar y capacidad de concentración, incluso en condiciones de smog o alta concentración de polen. También reducen la carga sobre el ventilador, protegen el sistema de calefacción, aire acondicionado y el interior del vehículo contra la contaminación, y previenen el empañamiento de los cristales.

Ventajas de la geometría de pliegues de nuestros filtros de cabina:

- Larga vida útil
- Baja resistencia al flujo, lo que minimiza la carga sobre el ventilador
- Ajuste preciso que elimina el paso de aire sin filtrar

Además, nuestros filtros de cabina no emiten vapores nocivos, ya que se fabrican mediante métodos libres de solventes.

Filtros de cabina con carbón activado (LAK)

El bloque de papel utilizado en estos filtros consta de tres capas: una capa de carbón activado incrustada entre dos capas de vellón. Esto bloquea gases de escape nocivos, suciedad, polvo y altas concentraciones de ozono, además de minimizar los malos olores.

En vehículos con alto kilometraje o que operan en entornos altamente contaminados, se utiliza con frecuencia un prefiltro adicional (LAP) hecho de espumas de poliéster o mantas de vellón, que evita que el filtro de cabina se obstruya prematuramente, prolongando considerablemente la vida útil de nuestros filtros LA/LAK.

Protección integral

MAHLE ofrece a los propietarios de vehículos una amplia selección de filtros de cabina, desarrollados específicamente para satisfacer sus necesidades individuales.

	Polen	Polvo fino	Hollín	Residuos de neumáticos	Polvo industrial	Gases de escape	Ozono	Olores leves	Olores intensos	Moho	Bacterias	Alérgenos

■ = Filtro de cabina sin carbón activado

■ = Filtro de cabina con carbón activado

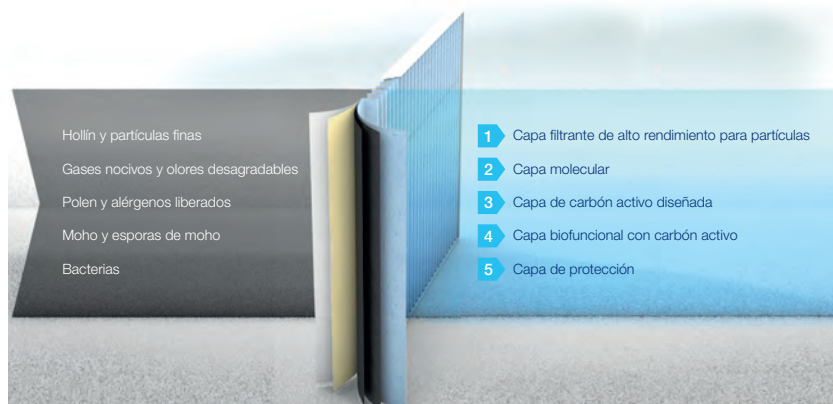

■ = Filtro de cabina con protección adicional contra olores

Filtros de aire para cabina CareMetix® (LAO)

Gases nocivos como el amoníaco y el azufre, junto con olores desagradables, pueden generarse en atascos de tráfico, túneles, grandes obras de construcción, plantas de tratamiento de aguas residuales o campos recién fertilizados. El nuevo filtro de cabina CareMetix® ofrece protección gracias a la tecnología de banda ancha S5. Esta tecnología garantiza que las partículas finas, el polen, el moho, el hollín, las bacterias y los olores no entren en el habitáculo.

CareMetix® (LAO)

Cuando estás en la carretera, necesitas aire limpio para concentrarte, conducir con seguridad y sentirte bien. Pero el aire que respiramos a menudo está contaminado con sustancias nocivas, alérgenos y olores que los filtros convencionales no pueden eliminar. La solución: **CareMetix®** con tecnología de banda ancha S5: 5 capas que brindan una protección quintuple ¡y también filtran los olores!

1 Filtra el polen, las partículas finas (PM2.5, PM1) y las ultrafinas (por ejemplo, hollín de diésel y polvo de frenos)

2 Elimina los olores desagradables, protege contra los alérgenos y previene casi por completo el crecimiento de bacterias y moho

3 Altamente eficaz en la eliminación de gases nocivos como los hidrocarburos

4 Altamente eficaz en la eliminación de gases nocivos como los óxidos de nitrógeno (NO_x) y el dióxido de azufre (SO₂)

5 Ayuda a aumentar la estabilidad del filtro

español

Protección contra el hollín y las partículas finas (PM2.5 y PM1)

Protección contra gases nocivos y olores desagradables

Protección contra el polen y los alérgenos liberados

Protección contra esporas de moho

Protección contra bacterias

Importante saber:

Los filtros de cabina deben reemplazarse anualmente o al menos cada 15,000 millas. Esto garantiza que tú y tus seres queridos respiren solo aire fresco. Los filtros **CareMetix®** también están disponibles para aplicaciones híbridas y vehículos eléctricos (BEV).

Filtros de combustible (KC / KL / KX)

Los filtros de combustible MAHLE capturan contaminantes finos para proteger el sistema de combustible contra la corrosión y garantizar un funcionamiento suave del motor. La regulación de presión y la amortiguación de pulsaciones mantienen un flujo de combustible constante, incluso durante arranques en frío o cuando los filtros están obstruidos. Diseñados para cumplir con estrictas normas de seguridad, permanecen herméticos, incluso en caso de accidentes.

Para asegurar un rendimiento óptimo y proteger el motor, los filtros de combustible deben reemplazarse regularmente según los intervalos de servicio recomendados por el fabricante del vehículo. Con materiales de alta calidad y una ingeniería precisa, los filtros de combustible MAHLE ofrecen una fiabilidad duradera para sistemas de combustible modernos.

Filtros de combustible de rosca (KC)

Se enroscan directamente en el adaptador de rosca del cabezal del filtro. Las juntas de elastómero montadas aseguran la estanqueidad entre el cabezal y el filtro.

Filtros de combustible en línea (KL)

Están hechos de chapa de acero con protección contra la corrosión, acero inoxidable, aluminio o plástico, y se montan en la línea de combustible. Se pueden incluir funciones opcionales como regulación de presión, precalentamiento y separación de agua.

Elementos de filtro de combustible (KX)

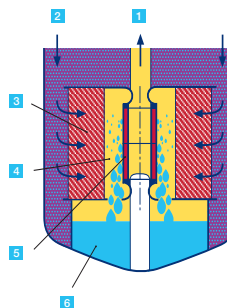

En carcasas de filtro que pueden abrirse, solo se reemplazan los elementos filtrantes durante el servicio. La carcasa permanece en el motor. Esto ahorra costos de material y conserva recursos.

Filtros de combustible diésel

Para evitar la separación de la parafina y la gelificación del combustible en condiciones de frío, los filtros de combustible MAHLE utilizan elementos de calefacción eléctricos o recirculan el combustible calentado proveniente del motor. Los sistemas más nuevos también separan eficientemente el agua del diésel, protegiendo el sistema de inyección contra la corrosión y los daños por cavitación..

La separación de agua se realiza en dos fases:

- **Fase 1:** Las gotas finas de agua se agrupan en gotas más grandes durante la filtración de partículas.
- **Fase 2:** Una capa hidrofóbica bloquea estas gotas más grandes para que no entren en el combustible limpio.

- 1 Combustible filtrado
- 2 Emulsión aguas abajo de la bomba
- 3 Separación de partículas y aglomeración de gotas de agua
- 4 Diésel limpio con gotas de agua
- 5 Malla hidrofóbica
- 6 Volumen de agua recogida

Diagrama de un filtro de dos etapas con separador de agua integrado

Nuevo e innovador

MAHLE ha desarrollado un módulo de filtro de combustible patentado para vehículos comerciales que incorpora un elemento de múltiples etapas capaz de separar el agua de manera eficaz. Primero se filtran las partículas sólidas, seguido por la coalescencia de microgotas en gotas más grandes para una eliminación eficiente del agua.

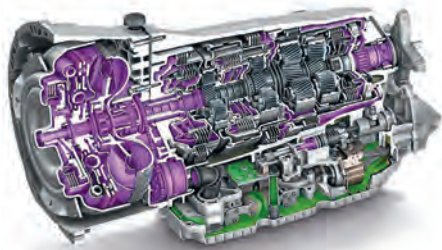

Filtros de aceite de transmisión (HX)

Para una mayor vida útil de la transmisión

Al igual que todos los fluidos operativos del vehículo, el aceite de transmisión está sujeto al envejecimiento y al desgaste. A temperaturas extremadamente altas—provocadas, por ejemplo, por una conducción deportiva o al remolcar un tráiler—el aceite de transmisión automática puede envejecer más rápido que en condiciones normales.

Comparación de métodos de cambio de aceite

■ Cambio de aceite estático

■ + ■ Cambio de aceite dinámico

Para prolongar la vida útil de transmisiones automáticas cada vez más complejas y garantizar un funcionamiento suave, muchos fabricantes de vehículos están cambiando sus directrices sobre el aceite de transmisión. Están dejando atrás la estrategia de llenado para toda la vida útil del vehículo y adoptando el cambio regular o según sea necesario.

Simplemente mejor: cambio dinámico de aceite

En un cambio de aceite convencional o estático, se reemplaza aproximadamente entre el 30% y el 50% del aceite de transmisión, y el aceite nuevo se mezcla con el viejo. En cambio, en un cambio dinámico de aceite de transmisión realizado con la unidad de lavado MAHLE FluidPRO® ATX-280, se reemplaza hasta el 100% del aceite.

Beneficios para los propietarios de vehículos:

- + Evita costos de reparación de la transmisión
- + Mejora significativamente el rendimiento del cambio de marchas
- + Elimina fallos menores de la transmisión (como tirones o mal comportamiento al arrancar)
- + Prolonga la vida útil de la transmisión

Filtros de aceite de transmisión MAHLE

Nuestros filtros de aceite de transmisión eliminan partículas de desgaste de la transmisión y ofrecen una protección eficaz contra daños. MAHLE ya ofrece soluciones adecuadas para muchas marcas y tipos de vehículos populares. Y nuestra gama seguirá ampliándose en el futuro.

Importante saber

A partir de 2025, más del 70% de los vehículos vendidos en EE. UU. y Canadá vienen equipados con transmisiones automáticas de serie, lo que convierte a América del Norte en el mayor mercado de transmisiones automáticas del mundo. Esta dominancia es especialmente notable en los vehículos de pasajeros, donde más del 85% de los autos nuevos vendidos en EE. UU. cuentan con transmisión automática.

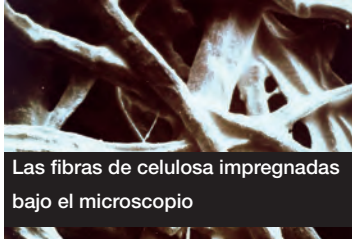

Cambiar el aceite de transmisión cada **30,000 to 60,000 millas** o cada **3 a 5 años** prolonga la vida útil de las transmisiones automáticas complejas y garantiza un comportamiento óptimo en el cambio de marchas.

Medios filtrantes

Nuestra gama de medios filtrantes consiste en papeles tratados especialmente, vellones no tejidos o medios filtrantes multicapa, según la especificación y la aplicación.

Filtros de papel

Los filtros de papel MAHLE se fabrican con fibras de celulosa de alta calidad impregnadas con resinas especializadas, lo que garantiza durabilidad y un rendimiento constante en una amplia gama de aplicaciones. Un proceso de producción preciso—que incluye precalentamiento, estampado de crestas verticales,

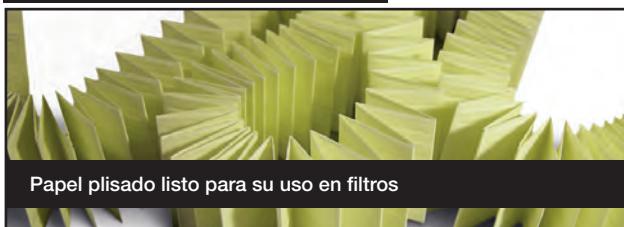

Las fibras de celulosa impregnadas bajo el microscopio

plisado y curado térmico—crea un medio filtrante mecánicamente estable que resiste el estrés químico y térmico.

El resultado es un filtro con geometría de pliegues estable que evita la formación de bloques incluso bajo condiciones de alta carga, permitiendo que el aire, el aceite, el combustible o el fluido hidráulico fluyan libremente. Con capacidades de filtración de hasta 1 micrón (μm), los filtros MAHLE ofrecen una eliminación superior de contaminantes y una vida útil prolongada, lo que los convierte en una opción ideal para entornos exigentes en sistemas automotrices, industriales e hidráulicos.

Papel filtrante después del estampado

Papel plisado listo para su uso en filtros

Vellones no tejidos de alto rendimiento

Fabricados con fibras plásticas ultrafinas en el rango de micrones (μm), estos vellones aumentan la eficiencia de

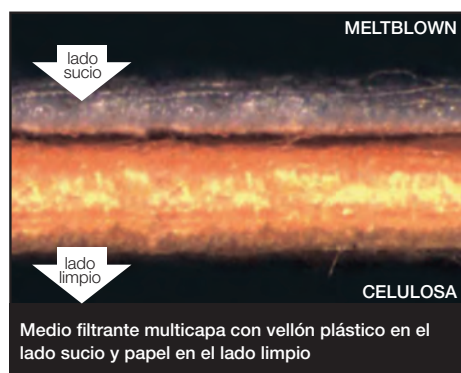

Efecto embudo de los filtros no tejidos

filtración hasta en un 40%. Dispuestos en capas para lograr un “efecto embudo”, alcanzan una retención de hasta el 99.9% con baja

resistencia al flujo. Confiables en una amplia gama de aplicaciones, están probados en filtros de cabina, aceite, aire y combustible—frecuentemente combinados con papel base para mayor durabilidad. Al mejorar la eliminación de contaminantes y extender la vida útil, los vellones no tejidos ofrecen una filtración confiable y de alta eficiencia para sistemas modernos.

Medios filtrantes multicapa

Estos medios filtrantes avanzados combinan vellón no tejido y papel mediante un proceso de producción complejo, ofreciendo hasta un 40% más de capacidad de absorción que los filtros de papel convencionales. Capaces de filtrar partículas tan pequeñas como 3–5 micrones (μm), son ideales para sistemas modernos de inyección de combustible diésel—including inyección directa turbo diésel, common rail y tecnologías de bomba-inyector—donde la alta eficiencia y durabilidad son esenciales..

Medio filtrante multicapa con vellón plástico en el lado sucio y papel en el lado limpio

Prefacio

Estimados profesionales del sector automovilístico:

¿No existen los verdaderos héroes? ¡En MAHLE nos complace ofrecerle una opinión diferente!

Su trabajo es la base de la industria de la posventa. Diariamente, usted se asegura de que los vehículos funcionen de forma eficiente, segura y fiable. En MAHLE, comprendemos la importancia de los productos de alta calidad en sus operaciones diarias; por eso nos comprometemos a ofrecerle las mejores soluciones de posventa que cumplan con los más altos estándares.

Este catálogo está diseñado para ayudarle a encontrar rápidamente las piezas y herramientas MAHLE adecuadas para sus reparaciones, justo donde las necesita. Nuestra oferta integral de servicios abarca desde filtración y gestión térmica hasta componentes del sistema de propulsión, sistemas eléctricos, así como equipos y diagnósticos para talleres. MAHLE Lifecycle and Mobility tiene como objetivo facilitarle el trabajo proporcionándole productos de ingeniería de precisión, según las especificaciones de los fabricantes de vehículos, que se adaptan perfectamente y funcionan a la perfección.

Sabemos que en su sector, el tiempo es valioso. Por ello, seguimos mejorando nuestra gama, optimizando nuestro catálogo y brindándole apoyo con los últimos conocimientos técnicos. Tanto si se dedica al mantenimiento de turismos como de vehículos comerciales, o si se centra en motores industriales, aplicaciones de construcción o agrícolas, puede confiar en MAHLE para obtener soluciones innovadoras y fiables.

“

Gracias por su dedicación y experiencia. Nos enorgullece apoyarlos para que sus vehículos vuelvan a circular y para que sus clientes sigan en movimiento y satisfechos.

Philipp Grosse Kleimann

Philipp Grosse Kleimann

Miembro del Comité de Dirección de MAHLE y responsable de la unidad de negocio Lifecycle y Mobility.

Las portadas interiores de nuestro catálogo muestran "MAHLE Repair Shop Heroes", la nueva campaña internacional de MAHLE Lifecycle and Mobility. Utiliza el glamour de Hollywood y

títulos taquilleros para destacar a los mecánicos, sus productos y servicios. A continuación, encontrará ejemplos de imágenes de la nueva campaña de MAHLE.

"Thermonator" resalta la amplia gama de productos y servicios de gestión térmica de MAHLE.

"El filtro y lo furioso" es un homenaje a la amplia gama de filtros MAHLE Lifecycle and Mobility.

Todo incluido: los compresores MAHLE no te presionan y no hay necesidad de fanfarronear, porque siempre tienes lo mejor en tus manos.

Las juntas MAHLE están hechas para temperaturas extremas y altas presiones internas, como de otra galaxia.

Los pistones MAHLE son resistentes como clavos: calidad superior y una amplia gama de tipos de pistones para cada tipo de motor. Productos y servicios.

MAHLE envía este mensaje a todos los mecánicos: "No importa qué tipo de problema, estamos aquí para ayudarle, ¡incluso fuera de la carretera!"

Filter prefix designations

Désignations des préfixes de filtre

Designaciones de prefijos de filtro

MAHLE Filter designations are listed alpha-numerically, with letters indicating the specific filter type:

Les désignations sont listées de façon Alphanumérique, avec lettres spécifiques aux filtres:

Las designaciones están listadas en orden alfa-numérico, con siglas que indican específicamente el tipo de filtro:

Prefix	English	Français	Español
AL	Air dryer/air brake system filter	Séchoir a air / système de freins a air	Filtro secador para el sistema de frenos de aire
GC	Spin-on gearbox oil filter	Filtre a huile visse sur transmission	Filtro sellado para aceite de transmisión
HC	Spin-on hydraulic filter	Filtre de transmission / hydraulique de type cartouche	Filtro hidráulico sellado
HX	Hydraulic/Transmission filter cartridge	Cartouche de filtre hydraulique/de transmission	Cartucho para filtro de transmisión / hidráulico
KC	Spin-on fuel filter	Filtre a essence visse	Filtro para combustible sellado
KL	In-line fuel filter	Filtre a essence enligne	Filtro para combustible en línea
KLH	In-line fuel filter with bracket	Filtre a essence enligne avec attache	Filtro para combustible en línea con soporte
KS	Fuel water separator	Filtre séparateur d'eau pour carburant	Separador de agua para combustible
KX	Fuel filter cartridge	Filtre a essence cartouche	Cartucho filtro para combustible
LA	Cabin air particle filter (standard)	Filtre d'habitacle conventionnel	Filtro para cabina (estándar)
LAG	Cabin air particle filter including housing	Filtre d'habitacle conventionnel avec boîtier incl.	Filtro para cabina incluye carcasa
LAK	Cabin air activated carbon filter (premium)	Filtre d'habitacle au charbon active	Filtro para cabina con carbón activado (premium)
LAKG	Cabin air activated carbon filter including housing	Filtre d'habitacle au charbon active avec boîtier incl.	Filtro para cabina con carbón activado incluye carcasa
LAR	Cabin air filter including frame	Filtre d'habitacle incl. Contour cadre	Filtro para cabina incluye marco
LC	Air filter cartridge	Filtre d'habitacle cartouche	Cartucho filtro para aire
LKK	Cabin air (activated carbon) filter kit	Kit de filtre d'habitacle au charbon active	Kit de Filtro para cabina con carbon activado
LX	Air filter (primary)	Filtre a air primaire	Filtro para aire (primario)
LXS	Safety air filter (secondary)	Filtre a air secondaire	Filtro de seguridad para aire (secundario)
OC	Spin-on oil filter	Filtre a huile visse (Spin-On)	Filtro para aceite sellado
OR	Eco oil filter	Filtre a huile écologique	Filtro para aceite Eco
OX	Oil filter cartridge	Filtre a huile cartouche	Cartucho filtro para aceite
OZ	Centrifuge type oil filter	Filtre a huile centrifuge	Filtro para aceite tipo centrifugo
SOX	Oil mist separator	Séparateur d'huile	Separador de gases para aceite
UX	Urea filter	Filtre à urée	Filtro de urea
WFC	Coolant filter	Filtre a liquide de refroidissement	Filtro para refrigerante

Filter abbreviations

Abréviations des filtres

Abreviaturas de filtros

MAHLE Filter designations used within the catalog:

Désignations des filtres MAHLE utilisées dans le catalogue:

Designaciones de filtros MAHLE utilizadas en el catálogo:

Abbr.	English	Français	Español
ASP	Aspiration (i.e. naturally aspirated, turbo etc)	Aspiration (i.e. naturelle, par turbo etc.)	Aspiración (ejemplo: aspiración natural, turbo, etc)
AWD	All wheel drive	4 roues motrices (Traction intégrale)	Tracción en las 4 ruedas
CB	Carburetor	Carbureteur	Carburador
CID	Cubic Inch Displacement	Cylindrée	Pulgadas cúbicas de desplazamiento
CYL	Cylinders	Cylindre	Cilindros
DEL	Fuel Delivery (i.e. carburetor or injection)	Injection ou Carbureteur	Sistema de combustible (ejemplo: carburado o inyección)
E/Cap	End cap	Embout	Tapa final
ENG	Engine number	No. de moteur	Número de motor
FI	Fuel Injection	Injection de carburant	Inyección de combustible
FWD	Front wheel drive	Front wheel drive	Tracción delantera
L4	4 cylinder in-line	4 Cylindres en ligne	4 cilindros en línea
Loc:	Location of cabin air filter	Emplacement du filtre d'habitacle	Ubicación filtro para cabina
Loc: EC	Engine compartment	Compartiment moteur	Compartimiento de motor
Loc: GB	Glove box	Boite a gants	Guantera
Loc: UD	Under dash	Sous tableau de bord	Debajo del tablero
N	Naturally aspirated	Aspiration conventionnel	Aspiración natural
S	Supercharged	Supercharged	Supercargado
T	Turbocharged	Turbo compresse	Turbocargado
VIN	VIN code	Numéro d'identification du véhicule	Código VIN
