MAHLE

Honda Civic Exhaust Manifold 1.8L engines

Another example of MAHLE OE Form, Fit & Function! OE Honda design uses a multi-layer stainless steel with embossment which concentrates the sealing load to prevent leaks and burn out. The MAHLE® gasket for the Honda has OE form, fit & function utilizing the same style multi-layer stainless steel with embossment... delivering the same performance as the original! The competitor uses a perforated material without embossment which can allow for creep and burn out.
